NEW FOR TENSION HEADACHE

32
CAPLETS

PROPAIN
PLUS

Tension headache relief

PROPAIN® PLUS - PROFITS you and your customers

You get a product which offers an advantageous profit on return as well as a £1m TV, radio and press campaign to fire up demand.

Your customers get a treatment for tension headache they'll want to come back for - time and time again.

Paracetamol 450mg an effective analgesic to stop the pain. Also acts as an antipyretic (lowers a raised body temperature).

Codeine Phosphate 10mg acts quickly on the brain to reduce pain signals.

Caffeine 30mg a co-analgesic and mild stimulant to speed up the action of the paracetamol.

Doxylamine Succinate 5mg an antihistamine with a sedative effect to help relax muscular tension.

Film coated tablets that are easy to take.

To order product or point of sale for your store, please phone the Sankyo Customer Helpline on:

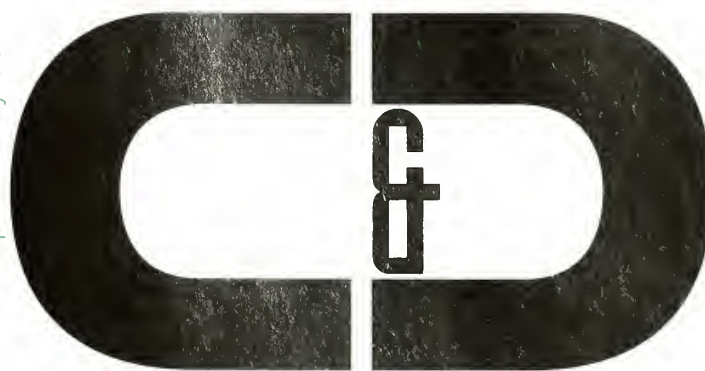

080 068 7616

PROPAIN® Plus Caplets. ABBREVIATED PRODUCT INFORMATION. Please refer to Summary of Product Characteristics for full product information. **Presentation:** White compressed capsule shaped tablets with P450 embossed on reverse, each containing paracetamol BP 450 mg, doxylamine succinate USP 5mg, caffeine anhydrous BP 30mg, codeine phosphate BP 10mg. **Indications:** Treatment of tension headache, toothache, sore throat, backache, migraine, neuralgia, dysmenorrhoea, muscular and rheumatic aches and pains. Propain® Plus is also indicated for post-operative analgesia following surgical or dental procedures and for the relief of pain and reduction of fever associated with influenza and colds. **Dosage:** Adults and children over 12 years of age: 1 or 2 caplets every four to six hours up to a maximum of 6 caplets in 24 hours. The suggested dosage may also be administered to the elderly (in the absence of other contra-indications). Not suitable for use by children under 12 years of age. Not intended for use over long periods without consulting a doctor. **Contra-indications:** Propain® Plus is contra-indicated in patients with known hypersensitivity to any of the ingredients. Not recommended in pregnancy and lactation. Not to be taken with other paracetamol-containing products. **Special warnings and precautions:** Propain® Plus should only be taken with caution by asthmatics. Propain® Plus may cause drowsiness and affect individuals should not drive or operate machinery. This may be aggravated by simultaneous intake of alcohol. As with all medicines containing paracetamol, codeine or antihistamines, caution should be exercised in patients with compromised liver or renal function. Caution is advised in patients with hypertension, hypothyroidism, adrenocortical insufficiency, prostatic hypertrophy, shock, obstructive bowel disorders, recent gastrointestinal surgery, gallstones, a history of cardiac arrhythmia or convulsions. The recommended dose should not be exceeded. **Side Effects:** Adverse effects of paracetamol are rare but hypersensitivity including skin rash may occur. Adverse effects of antihistamines vary but the most common is sedation. Caffeine may cause nausea, headache and insomnia. Codeine may cause constipation, nausea, vomiting, dizziness, drowsiness and respiratory depression in sensitive patients. Skin rashes have been seen rarely in hypersensitive patients. **Market Authorisation number:** Propain® Plus tablets (PL 4416/0363). **Market Authorisation holder:** Lagap Pharmaceuticals Ltd, Woolmer Way, Bordon, Hants GU35 9QE. **Legal category:** P. **Trade price:** 16 caplets £1.94 (R.R.P. £3.41), 32 caplets £2.96 (R.R.P. £5.20). Further information from: Medical Information, Sankyo Pharma UK Limited, Repton Place, Amersham, Bucks. HP7 9LP. **Date of preparation, API:** August 2003. PF0401T

Caution over multibuy offers

by **Adrienne de Mont**

ademont@cmpinformation.com

The Government might have to consider tighter controls on multibuy offers for medicines if they pose a risk to public health.

The Medicines and Healthcare products Regulatory Agency is discouraging manufacturers and retailers from running volume based promotions – such as “three for the price of two” and “buy one get one free” – that could encourage unnecessary purchases, particularly for analgesics.

MHRA's medicines updating service MAIL says the Government introduced legal restrictions on aspirin and paracetamol pack sizes to discourage stockpiling and reduce toxicity in overdose.

“Volume based price

promotions could undermine the intention of the legislation on pack size restrictions,” said MHRA.

The industry's guidelines already advise against promotions that could encourage consumers to buy analgesics, or other medicines with abuse potential, in greater quantities than necessary. And the MHRA monitors price-related promotions involving analgesics.

But health ministers have made it clear that if this self-regulation proves ineffective in protecting public health, “the option of legislation would have to be reviewed”.

● The MHRA has warned that claims such as “placebo-like” adverse effects should not be used in medicines advertising.

The agency has upheld a

complaint that claims relating to the “placebo-like tolerability” of Diovan (valsartan), in a promotional leaflet from Novartis, was not in line with its summary of product characteristics.

MHRA took the view that the term “placebo-like” implied there were no drug associated side effects, whereas the SPC lists several. The promotional material was withdrawn.

MAIL advises that promotional claims relating to a drug's safety profile should be factual and based on evidence from clinical trials and surveillance. Even if the incidence of side effects is similar to placebo it is likely that the drug will have side effects not commonly associated with a placebo or that certain effects occur with greater frequency.

Faulty rabies vaccine recalled

Aventis Pasteur MSD is recalling batch of rabies vaccine BP (Rab/Vac) as a precautionary measure.

The batch number is X0071-6 expiry December 2005. The single dose vial and syringe of diluent was first distributed in February.

The recall follows the discovery of a batch contaminated with a low level of live attenuated rabies virus, but not distributed.

The batch being recalled has passed European and US release procedures but was prepared at the same time as the faulty batch.

Stocks should be returned to the supplier for credit.

Dispensing fee is at 50-year low, says professor

by **Gary Paraguri**

gparaguri@cmpinformation.com

The dispensing fee paid to pharmacy contractors is now worth less than it was in 1950, a pharmacy academic has claimed.

Taking inflation into account, the fee earned per item fell from 7.3p in 1950 to just 5.9p in 2003, a fall of 20 per cent, Ian Jones, professor of pharmacy practice at Portsmouth University, has said (see table).

“Since [1990] the figures show the effect of government policy in keeping the fee payment per prescription in check,” said Professor Jones.

“This is an entirely predictable outcome of a conclusion of the 1986 Nuffield Report on pharmacy, which advocated that remuneration for dispensing be reduced and made up with

payments for other services. The discontinuation of the Dispensing Costs Inquiries in the 1980s is another factor in the stagnation of chemists' remuneration.”

However, the data is “even more disconcerting”, Professor Jones said, if payment for additional professional services is deducted. “If it is assumed that the ‘allowance’ up to 2003 takes approximately 20 per cent of the annual global sum, the ‘real’ fee per item corrected for inflation falls from 5.9p in 2003 to around 4.7p,” he said.

Commenting on the DoH's latest pay imposition for contractors, he said: “A 3.2 per cent [remuneration] increase has to be considered against the 5 to 6 per cent average increase in prescriptions in England and Wales since 2000.”

As the prescriptions have

already been dispensed and paid for, he said, contractors might find to their disappointment that the latest rise in fee income is in excess of that awarded “and presumably the difference between the two is recoverable.”

PSNC chief executive Sue Sharpe said 1950s pharmacy was a time of handwritten dispensing

labels and dispensed items wrapped in white daisy. She was unable to give any details of funding under the new contract or the current discussions with the Department of Health.

NPA chief executive John D'Arcy thought the figures demonstrated “what bloody good value pharmacy is”.

NHS prescription statistics: England & Wales

Year	Rx items (m)	Total Fees (£m)	Actual fee/item (p)	Retail price index (1950=100)	Real fee/item (1950=100)
1950	217.1	15.8	7.3	100	7.3
1960	218.7	26.2	12.0	149	8.0
1970	266.6	47.1	17.7	222	8.0
1980	327.0	192.3	58.8	799	7.4
1990	388.8	518.6	133.4	1507	8.9
2000	553.0	772.3	139.7	2024	6.9
2001	589.5	803.3	136.3	2060	6.6
2002*	573.4	744.2	131.1	2106	6.2
2003*	603.1	772.3	128.1	2167	5.9

* Chemist contractors England only

Notes: Data for England & Wales relates to Chemist & Appliance contractors. Total fees include dispensing/professional fees and, where payable, on cost and “payment for additional professional services” Source: OHE/PPA/RPI author's calculations

The DoH responded that it was committed to ensuring fair funding for the “provision of efficient and professional NHS pharmacy services, incentivising provision of higher levels of service that meet patients' needs and provide value for money for the NHS. And dispensing will, of course, remain an important part of pharmaceutical services under the new framework”.

Update knockout

A number of Pharmacy Update users have queried some of the questions on Module 1292 (Phenytoin Case Study). On advice from our external assessor, it has been decided this Module will not count as part of Update Knockout 2004. For more information contact Mary Prebble on 01732 377269.

Herbal warning

A traditional Chinese medicine is suspected in a case of liver failure in the UK. Nitrosufenfluramine is closely related to fenfluramine and is known to be toxic to the liver. It was found in Shubao – Slimming Capsules in Traditional Chinese Medicine outlets in the West Midlands. The Medicines and Healthcare products Regulatory Agency is investigating. Other products that may contain undeclared nitrosufenfluramine are SB Slimming Capsules, Ma zin dol, Shubaojiafeijiaolang and Ouian ER.

Jones to 'retire'

Trevor Jones is to step down as director of the Association of the British Pharmaceutical Industry. A successor is expected to be appointed later this summer. Prof Jones, a fellow of the RPSGB, is to take up a new role with the World Health Organization.

Pharmacist on trial

The trial of a Gloucester pharmacist charged with conspiracy to supply class A drugs has been adjourned.

Bristol Crown Court heard that Gary Fisher, of Matson Pharmacy, ordered large quantities of mannitol for co-accused Mark Singh, who is charged with conspiracy to supply class A and class B drugs, possession of class A drugs with intent to supply, and conspiracy to conceal the proceeds of drugs trafficking.

Mr Fisher claimed he did not know that mannitol was used as a cutting agent for heroin and added that the £50,000 found hidden in a safe in the pharmacy was there in case he needed to get away from a troubled marriage. Mr Fisher stated that he was not happy about the supply but added mannitol was not a Controlled Drug.

RPSGB urged to support campaign

by Gary Paragpuri

gparagpuri@cmpinformation.com

The Royal Pharmaceutical Society should support a campaign to stop violence in community pharmacies, a former Society president and current Council member has said.

Hemant Patel called on the Society's Council to write to ministers urging them to extend the NHS's zero-tolerance violence policy to community pharmacies.

Crime is being displaced from high streets to secondary parades due to better policing and initiatives such as CCTV, said Mr Patel at last week's Council meeting.

Violence in pharmacies is a key issue, especially with the

increasing feminisation of the pharmacy workforce, longer opening hours and requirements to police prescription exemptions, Mr Patel told Council. He also cited *Chemist & Druggist's* 'Stop Violence in Pharmacies' campaign, which had raised awareness of the issue.

President Gill Hawksworth welcomed the initiative and said it was important to send out the message that violence will not be tolerated, while immediate past president Marshall Davies said the Home Office should also be made aware of the issue.

Other issues agreed by Council included:

- There should be no mandatory requirement for vocational pharmacy undergraduates or pre-

registration students to meet the Society's minimum competence requirements for medicines counter or dispensing assistants. It will be the professional responsibility of supervising pharmacists to ensure that students only undertake tasks they are competent to perform.

- To bring forward the date when statutory registration for pharmacy technicians will begin to the earliest possible date after the Section 60 Order of the Health Act comes into force.

- That Council may charge pharmacists who nominate themselves for Fellowship of the Society a fee of up to £500 to cover the costs of any assessment required.

NICE eczema cream ruling criticised by skincare campaigners

by **Adrienne de Mont**

ademont@cmpinformation.com

The Skin Care Campaign has criticised a decision not to recommend pimicrolimus for the NHS treatment of mild to moderate eczema.

The National Institute for Clinical Excellence has recommended that tacrolimus be available as a second line treatment for moderate to severe

atopic eczema but is refusing to recommend funding for pimicrolimus, apparently because there is insufficient evidence comparing it with topical corticosteroids.

The SCC calls on NICE to review urgently this refusal, published in a final draft appraisal consultation document (ACD) on Monday.

Peter Lapsley, SCC's chief executive, said: "Pimecrolimus

and tacrolimus represent exciting treatment options for the face and flexures, meeting a current unmet demand [topical corticosteroids are not recommended because of the risk of skin thinning]. A patient should not need to be in the 'moderate to severe' category to qualify to receive this new class of treatment."

Another concern is "steroid-phobia," which results in some patients under-using or wasting

prescribed steroids. Because people react differently to different treatments, the widest possible range should be available on the NHS, argues SCC, which is an umbrella organisation representing the interests of all people with skin diseases in the UK.

Consultation on the ACD will close at 5pm on April 28.

MHRA warns on drug advert

An advertisement for a heartburn and indigestion product has fallen foul of the Government's health regulatory agency.

An TV advert for Gavilast aired last year was investigated as it used the phrase "New Gavilast from Gaviscon". This phrase was deemed to be misleading by the Medicines and Healthcare products Regulatory Agency.

It said the advert created the impression that the products could be used interchangeably, when Gaviscon is suitable for use for pregnant women and Gavilast is not. Reckitt Benckiser Healthcare has amended the advert.

Drug interaction concern

A potentially dangerous interaction between an antidepressant and a muscle relaxant has been identified by researchers in Finland.

Faverin (fluvoxamine) dramatically increases the blood concentration of Zanaflex (tizanidine) by on average 33 times. This can result in a severe and prolonged fall in blood pressure and enhanced CNS effects, the Helsinki University researchers found.

Fluvoxamine inhibited the metabolism of tizanidine by the liver, which resulted in the increase in blood concentration of the muscle relaxant. More studies will look for other possible interactions between tizanidine and other drugs.

Healthy volunteers took fluvoxamine 100mg for four days and then took a single dose of tizanidine 4mg. Each of the subjects experienced an increase in tizanidine concentration - the lowest being 14-fold and the highest was 103-fold. Some patients experienced an "alarming" drop in their systolic blood pressure to 80mmHg or even less.

The elderly and infirm could be at greater risk of severe hypotension, and women on oral contraceptives have a lower clearance of tizanidine the authors of the paper in *Clinical Pharmacology and Therapeutics* warned.

For more information:

Clin Pharmacol Ther 2004; 75: 331-41

PRACTICE

Pharmacy role in OA care

Eighty per cent of osteoarthritis patients live in constant pain and pharmacists can play a greater role in patients' pain management a report has claimed.

Pharmacists can be alert to patients who buy OTC pain medication in addition to their prescribed medication - something that could suggest that their treatments may not always be effective - and suggest the patient should consult their GP for a medication review, the *OA Nation* report suggested.

Croydon pharmacist Andrew McCoig said: "There is an opportunity for pharmacists to play an important role in improving the management of people with arthritis in the UK. Many people are self-medicating using OTC medications to supplement their prescriptions. Pharmacists should question their patients to ascertain whether this is appropriate and, where necessary, encourage them to see their GP for a review. This is particularly important for people who have concomitant conditions such as high blood pressure."

Of the patients surveyed, 69 per cent said that they have difficulty doing daily household tasks and 53 per cent struggle to get out of bed.

Arthritis Care public affairs director Neil Betteridge said: "With the UK facing an increasing older population, this is a problem that is only going to get bigger."

Questiontime

Sponsored by

UniChem

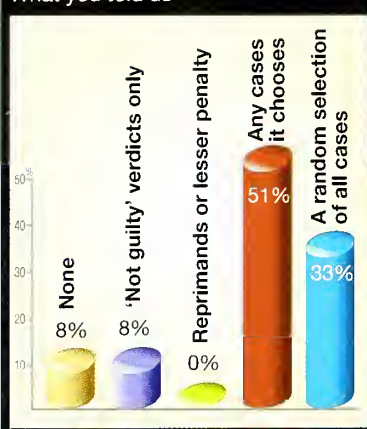

Last week we asked: "Which health professions disciplinary committee cases should the Council for the Regulation of Health Professionals be expected to monitor and possibly challenge?" You replied (see right):

This week's question: "Do you think the public holidays and Bank Holidays in the UK should be distributed differently?"

- No - leave them as they are
- Yes - space them evenly throughout the year
- Yes - move some of the spring holidays to autumn
- Yes - combine some to have more 4 day weekends

You can record your vote on our website: www.dotpharmacy.com. You have until noon on April 11 to cast your vote. We will publish the results in *C&D*, April 17.

What you told us

Bazuka® is on TV with the campaign that made it

the undisputed No 1*

- For a painless answer for warts and verrucas
- No need for plasters
- Nothing you can buy is more effective

bazuka that verruca

Source: IMS February 2004

BAZUKA Trademark and Product Licences held by Diomed Developments Ltd, Hitchin, Herts, SG4 7QR, UK. Distributed by DDD Ltd, 94 Rickmansworth Road, Watford, Herts, WD1 7JJ, UK. Indications: For the treatment of verrucas, warts, corns and calluses. Directions for use: For adults, the elderly and children: Once daily apply one or two drops of the gel to the lesion and allow to dry, taking care to avoid the normal surrounding skin. The following day, carefully remove the dried patch and apply fresh gel. Once every week, before re-applying fresh gel, gently rub the treated surface using the emery board provided. Continue treatment until the condition is resolved. This may take up to 12 weeks for certain verrucas and warts. Contra-indications: Not to be used on the face, neck, intertriginous or anogenital regions, or by diabetics or individuals with poor blood circulation. Not to be used on moles, birthmarks, hairy warts, or any other skin lesions for which the gel is not indicated. Not to be used in cases of sensitivity to any of the ingredients. Precautions and Warnings: Keep away from the eyes, mucous membranes and from cuts and grazes. Avoid spreading onto normal surrounding skin. Do not use excessively. Avoid inhaling vapour and keep cap firmly closed when not in use. Avoid contact with clothing, carpets, plastics and other materials, as it may cause damage. Side-effects: Some mild, transient irritation may occur, but in cases of more severe irritation or inflammation, treatment should be discontinued. Bazuka Gel and Bazuka Extra Strength Gel are highly flammable - Keep away from flames. Store at room temperature, not exceeding 25°C. Keep all medicines out of the reach of children. FOR EXTERNAL USE ONLY. Full Category: [P] Packs: Bazuka Gel (10/173/161) - 5p BSE 94 95 (54 21) exp. VAT. Bazuka Extra Strength Gel (10/173/154) - 5p BSE 94 95 (54 21) exp. VAT.

Minister urges moves on child medicines

Health minister Lord Warner has told the pharmaceutical industry that it could "raise its game" in paediatric medicines. He has also asked for US data regarding use of medicines in children to be submitted to the MHRA.

Describing the current situation as "simply unacceptable", he said that while waiting for regulatory changes to come from Europe, there are steps that the UK can take now to improve the situation.

He was concerned that children are often being treated with off-label and unlicensed medicines, while prescribers are having to guess at the correct dose.

The EC is expected to bring forward plans for paediatric trials to be part of the licensing process for every new medicine.

The minister said US firms had clinical data that led to improved labelling and information for use in children. Some 90 of these products are available here, but in most, the data have not been supplied to the MHRA.

"I have asked the MHRA to write to all the companies involved requesting the data," Lord Warner told the Association of the British Pharmaceutical Industry.

Government confirms control of entry relaxation

by **Adrienne de Mont**

ademont@cmpinformation.com

The Government has pledged to increase the choice of where, when and how patients get medicines – including freeing some restrictions on pharmacy openings.

"We propose to make it easier for new pharmacies to locate in areas where consumers already go, for example in large shopping developments, and to make it easier for pharmacies to open if they intend to be open for more than 100 hours a week," says the Department of Health in its response to the *Building on the best – choice, responsiveness and equity* consultation.

By December patients should be able to pick up repeat medication directly from their chosen pharmacy and by the end of 2007 patients should be able to get repeat medication from any pharmacy in England, under the new national NHS IT programme.

Easier access to medicines emerged as a high priority during the consultation, which involved over 110,000 people. The response, published this week, says the Government wants to

offer patients more choice in where they get their prescriptions dispensed – which in turn means more choice in where they can get medicines for self care.

The new IT programme will enable Internet pharmacies to offer dispensing services to NHS patients and the government will make it easier for mail order pharmacies to operate.

The strategy of making more medicines available off prescription will continue, with statins and other 'switches' expected for chronic migraine, gastro-intestinal conditions, asthma, pain management, eye infections and skin conditions.

"This approach, consistent with public safety, will give people more direct control and responsibility for managing their own health care, something our consultation shows they want to do."

All primary care trusts will be expected to consider commissioning minor ailment schemes from pharmacies; model service specifications and benchmark prices will be developed under the new community pharmacy contract.

By 2005 the Government would like optometrists and some allied health professionals to be

able to prescribe for patients.

"All these developments aim to make choice a reality for patients by cutting out the red tape and rules which insist on people following particular routes to get their medicines, however inconvenient and frustrating. The options need to be as diverse as the people using the service."

Other priorities include giving people a bigger say in how they are treated. From next year, patients will have access to a new service called HealthSpace, in which they can record their own treatment preferences securely on the internet. By June 2006 this should link to their electronic medical record so they can make their wishes known to the clinical team. December 2008 should see full implementation of the NHS Care Record.

There will also be a programme of "kitemarking" information from a variety of sources so that patients know what to rely on. NHS Direct will be launched on digital television this summer and by April 2005 NHS Direct self care information will be included in Thomson Local telephone directories.

For more information:

www.druginfozone.nhs.uk

Adverse OFT ruling could affect new contract vote

Pharmacy contractors adversely affected by Government plans to increase competition in the sector may not back the new pharmacy contract, NPA chief executive John D'Arcy has warned.

Contractors' commitment to accepting funding under the new pharmacy contract is directly linked to what happens with control of entry, Mr D'Arcy said, adding that if changes were unreasonable it would "be reflected quite naturally in contractors' attitude to the new contract".

Further, Mr D'Arcy and NPA chairman Hemant Patel had an hour-long meeting with health minister Rosie Winterton last Friday. Commenting on the meeting, Mr D'Arcy said: "We

made the point that if pharmacy is to deliver on the contract [to which] it's shown commitment by voting on the contract structure, it's not going to be able to do it unless it's resourced."

The NPA delegation also highlighted to Ms Winterton the lack of pharmacy involvement in the DoH's latest chronic disease management pilots (*C&D*, Mar 20, p5). "One of the [American] type models seems to suggest keeping [chronic disease management] in primary care accessible to local communities, which plays right into pharmacy ballpark. So it seems odd that we're not included in that," Mr D'Arcy said, but added the minister confirmed she wanted "pharmacy tied in at all levels".

We're expecting blooming great sales again this year.

Zirtek was the fastest growing oral OTC Allergy relief product in the UK during the hayfever season of 2003, outgrowing the market by 10%¹ on a volume basis.

And remember, Zirtek has so much to offer your customers:

- ✓ Zirtek works faster than Claritin[®] in hayfever²
- ✓ Zirtek is classified as non-drowsy^{3*}
- ✓ Zirtek can be taken with other medication as it has no known drug interactions
- ✓ Zirtek is not significantly metabolised in the liver – no dosage adjustment for customers with liver impairment
- ✓ Zirtek offers the convenience of both tablet and solution formats.

Roche bids lining up

The Telegraph has reported that GlaxoSmithKline and Pfizer are lining up initial bids of about £1bn for the consumer health brands division of Roche (C&D, February 28, p12).

It says initial bids for the over-the-counter medicines business, which includes the Rennie and Berocca brands, are due before Easter.

TOPRA updates MSc

TOPRA has updated its MSc in Regulatory Affairs in order to meet the challenges of the new Clinical Trial Directive which will be implemented on May 1. All TOPRA's courses are designed for professionals working in Regulatory Affairs who have already gained first hand experience of handling regulatory issues.

Shire signs Reminyl

Shire Pharmaceuticals Group has signed an agreement with Janssen Pharmaceutica NV to acquire the exclusive rights to Reminyl in the UK and Ireland for an undisclosed cash payment.

Prior to this agreement, Shire and Janssen had joint responsibility for the marketing of the drug in the UK and Ireland. Under the terms of the new agreement Shire will assume full developmental and promotional rights to Reminyl in the UK and Ireland, increasing the company's focus and scope in this region. Janssen retains the rights elsewhere in the world.

Manx gets Midrid

Manx Healthcare Limited has acquired the Midrid headache and migraine treatment product licence and brand, from Elan subsidiary GW Carrick & Co. Limited for an undisclosed sum.

Midrid was previously licensed to Shire Pharmaceuticals which ceased manufacture of the product last year due to manufacturing complications. Manx Healthcare Limited is the former distributor of the product under their Manx Pharma brand.

DepoCyte in Europe

SkyePharma and its marketing partner Mundipharma International have launched DepoCyte, a major advance in the treatment of lymphomatous meningitis, in Europe.

Mundipharma has exclusive marketing and distribution rights for this product for most European and Eastern European countries.

Warner backs ABPI over animal rights extremists

The pharmaceutical industry has had ministerial support for the need for more protection against animal rights activists.

Dr John Patterson, president of the Association of the British Pharmaceutical Industry, said last week that the biggest threat to future bioscience and R&D investment in the UK is the activity of animal extremists.

He called on the government to consider further legislation or stronger policing as a means of tackling the situation now while modern experimental alternatives to animals come on line.

Speaking at the ABPI's annual dinner at which health minister Lord Warner was guest of honour, Dr Patterson acknowledged the efforts made so far by the Government, including the amendments it has made to the Anti-social Behaviour Act. "However, these policies have

Lord Warner, Health Minister, failed to curb the activities of extremists," he said.

In the last few months incidents have included acid being poured over the cars of secretarial staff, executives' neighbours houses being sprayed with graffiti, or people being labelled paedophiles

on the internet. "What kind of message are we sending to the international research community? It's certainly not 'Invest in Britain'," he said.

Lord Warner agreed that the "thugs and criminals who are so called animal rights extremists" are a potential threat to British research.

"We have put in place new legislation and established a new National Extremism Tactical Co-ordination Unit in the police," he said.

"I can assure you that we will continue to discuss with you whether we need further legislation. But I am also convinced that it is the enforcement of legislation that is the key ... senior police officers and prosecutors are under no misapprehension that more arrests and successful prosecutions are needed."

Common origin not a prerequisite for PI trade

The European Court of Justice has reaffirmed that the EU's free movement rules preclude a parallel import marketing application being rejected merely because identical products in the source and destination countries fail to have a common origin.

The decision came in the case of Kohlpharma GmbH versus The Federal Republic of Germany, over two anti-Parkinson brands containing the same amount of the active ingredient selegiline hydrochloride, manufactured by Chinoin.

It was marketed in Italy by Chiesi as Jumex, and in Germany by Orion as Movergan.

In 1994, Kohlpharma requested authorisation to parallel import

Jumex into Germany as competition to Movergan.

This was refused because, as the active ingredient for Movergan was supplied via a supply agreement rather than a licensing agreement, there was no common origin.

Kohlpharma claimed the Court did not establish identity of origin as a binding principle, but merely took this into account.

This latest judgement agreed and the Court also clarified that the burden of proof is on the relevant national authority granting authorisation to show the criteria allowing parallel trade are not satisfied.

Dictionary can be downloaded

The first release of the combined NHS dictionary of medicines and devices (dm+d) is now available for download at www.dmd.nhs.uk

The current files for the Primary Care Dictionary (PCDD, Release 1.0) will continue to be updated and available for the following 12 weeks. The dm+d, Release 2.0 incorporates PCDD data into the harmonised model and includes some secondary care items. Population of both primary and secondary care items will be extended on an ongoing basis. Data on devices will remain limited to those appliances and devices listed in the *Drug Tariff* until further work is completed.

Suppliers registered for PCDD will be able to access release 2.1 with existing user names and passwords.

New suppliers can register for access from the PPA website www.ppa.org.uk or the dmd website www.dmd.nhs.uk.

For more information:

dm+d help desk tel 0845 850 0001
dmdenquiries@ppa.nhs.uk

NPA to partner Macmillan

The National Pharmaceutical Association has chosen Macmillan Cancer Relief as its charity partner.

The NPA will support

Macmillan over the next two years by encouraging members to raise funds for Macmillan and promote awareness of its work through Macmillan campaign information.

Some things work faster

as a Duo*

New Canesten Duo combines the power of two fast thrush treatments in one: an oral capsule to resolve the infection and double strength cream for symptom relief. A fast response to thrush, in one convenient pack.

*Canesten Oral and Cream Duo works faster to relieve the symptoms of Thrush than Canesten Oral alone

Product Information for Canesten® Oral & Cream Duo. Presentation: **Canesten® Oral Capsule** contains 150mg fluconazole. **Canesten Thrush Cream** contains clotrimazole 2% w/w. **Indications:** **Oral Capsule** Treatment of candidal vaginitis, acute or recurrent. Also for treatment of partners with associated candidal balanitis. **Thrush Cream** Treatment of candidal vulvitis. To be used as an adjunct to treatment of candidal vaginitis. Can also be used for treatment of the sexual partner's penis to prevent re-infection. **Dosage and Administration:** **Adults (16 – 60 years)** Swallow one capsule. Apply cream to vulva and surrounding area two or three times daily and rub in gently. Treatment should be continued until symptoms of the infection disappear. If after concomitant treatment of vaginitis, symptoms do not improve within seven days, the patient should consult a physician. For treatment of sexual partner's penis, cream should be applied two or three times daily for two weeks. **Contra-indications:** Hypersensitivity to fluconazole, clotrimazole, related azole compounds or any of the excipients, co-administration with terfenadine or cisapride; pregnancy, suspected pregnancy and breast feeding. **Warnings and Precautions:** Adequate contraception necessary. A physician should be consulted if the patient or partner have had exposure to sexually transmitted disease, or if the patient: has had more than two infections of thrush in the last six months; is experiencing thrush for the first time; has known hypersensitivity to imidazoles or other vaginal antifungal products; is taking any

medicine other than the Pill; has any disease or illness affecting the liver or kidneys or has had unexplained jaundice; suffers from any other chronic disease or illness, is uncertain of the cause of symptoms. Or if the patient has any of the following symptoms: abnormal or irregular vaginal bleeding or a blood-stained discharge, vulval or vaginal sores, ulcers or blisters, lower abdominal pain or dysuria; any adverse events such as redness, irritation or swelling associated with the treatment; fever or chills; nausea or vomiting; diarrhoea; foul smelling vaginal discharge. In men, medical advice should be sought if, sexual partner does not have thrush; they have penile sores, ulcers or blisters; there is abnormal penile discharge, penis has started to smell; dysuria. Patients should consult their doctor if symptoms have not been relieved within one week. The cream may damage latex contraceptives so patients should be advised to use alternative precautions for at least five days. **Side-effects:** Nausea, abdominal pain, diarrhoea and flatulence. Rarely, rash, headache, hepatotoxicity and anaphylaxis. Cream may cause local mild burning or irritation immediately after use and hypersensitivity reactions. **Cost:** £12.50 **MA Number:** PL 00010/0282 & PL 00010/0077 **MA Holder:** Bayer plc, Consumer Care Division, Newbury, Berkshire RG14 1JA **Legal Category:** P. **Date of Preparation:** February 2004.

Aventis invites Novartis bid to hold off hostile Sanofi advances

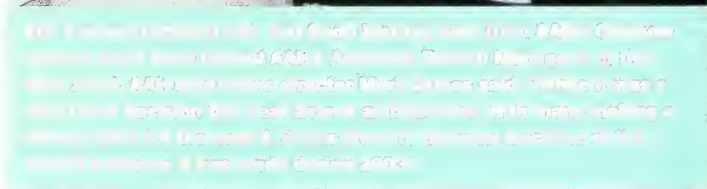

sjankovic@cmpinformation.com

The Board says it will enter into negotiations with Novartis on the terms and conditions of a potential combination and pursue discussions with the relevant authorities in France and

"We are inviting Novartis to enter negotiations because we believe that such a combination would offer significant advantages for Aventis shareholders and employees as it would create the leading European pharmaceutical company with an attractive portfolio, a strong product pipeline and outstanding R&D capabilities," Jürgen Dormann and Jean-René Fourtou, chairman and vice-chairman of the Aventis

Jürgen Dormann and Jean-René Fourtou said: "We are aware of the views of the French and German governments and Aventis will do its best to address them."

● Novartis' generics arm, Sandoz, is suing the European Commission for standing still on its approval for the human growth hormone Omnitrop. The Commission recommended approval for the drug last year but has yet to ratify this. It denies this amounts to a rejection.

Nucare designs private consultation area

The area will be large enough to house two chairs and a small table for equipment and private enough to protect customer confidentiality. It is available either as a permanent fitting or on castors so it can be folded away after use. The screens are made of opaque acrylic so the patient has privacy but can be seen in outline

Nucare is aiming to add to its 70 branded store openings so far with another 110 planned by the end of 2004.

PI study flawed, claims EAEPC

by Sasa Janković

sjankovic@cmpinformation.com

The European Association of Euro-Pharmaceutical Companies has claimed a recent LSE study on parallel trade is "seriously flawed" and the "results invalid".

After examining *The Economic Impact of Pharmaceutical Parallel Trade in European Union Member States* by Dr Panos Kanavos and others, Edwin Kohl, EAEPC president, said the study had "fundamental and widespread flaws as regards methodology, facts and calculations".

Mr Kohl claims some of the study's main deficiencies included the alleged low impact of parallel trade on the entire market being based on analysis of only 19 molecules. He describes this as a "totally unrepresentative sample, with many products not experiencing any parallel trade during the period under review".

He also claims the report "did not address the tough price competition between parallel traders either".

According to EAEPC: "The only well-researched, comprehensive and balanced quantitative study into the financial benefits of pharmaceutical parallel trade across the EU so far was published last year by health economists at the University of York."

"Some EAEPC member associations have also conducted their own national calculations. The findings are consistent: parallel trade produces considerable direct savings to healthcare systems and consumers, with indirect savings due to its competitive effect more difficult to quantify but likely to be even more significant."

For more information:

www.eaepc.org

Phoenix provides PI deals for Numark members

Numark has launched a bespoke parallel imports programme for its members in conjunction with Phoenix Healthcare Distribution.

The new programme aims to offer Numark members lower prices in more than 580 parallel imports, with over 70 per cent of products reduced in price.

Phoenix's pan-European network enables it to offer a twice daily delivery service. The programme will also offer a rebate structure based on turnover with increased rebate for members

spending more. Those spending over £8,000 per month will qualify for the top rebate of 6 per cent.

Numark marketing director Andrew Sollitt said: "Our new PI scheme effectively offers our members a one stop shop, dramatically cutting down the time they spend sourcing these products and we at Numark will be cross checking the pricing to ensure a competitive deal."

For more information:

Numark tel: 01675 444744

Moss pilots Nexphase

Moss Pharmacy is piloting Enigma Health's Nexphase pharmacy management system, as part of its ongoing commitment to customer service.

Moss has been working closely with Enigma on its new software package for community pharmacy for some time.

David Farrow, Enigma Health's

director of customer services, said: "With Moss's input we are confident we have developed not only a system that meets their requirements but one that will address the current and future needs of pharmacy within the UK."

Pharmacist working while on sick leave

A Boots pharmacist who worked as a locum in other Boots stores when he was supposed to be on sick leave was reprimanded by his professional body last month.

Derek Sukhdeo was employed by Boots in London at their Notting Hill and Queensway stores.

In June 2002 he told his manager that he was not feeling well following laser eye surgery and had been advised by his GP to take two weeks' sick leave.

Mr Sukhdeo's GP signed a medical certificate with Mr Sukhdeo declaring that he did not intend to return to work until June 27 2002 but he then sought and obtained employment via a locum agency at Boots' Wimbledon store on June 14, Boots' Richmond store on June 17

to 20 and Boots' Oxford Street store on June 22. He returned to work on June 27 and completed a self-certification form claiming sick pay for June 19, 20 and 22.

Mr Sukhdeo was accused at the RPSGB's Statutory Committee of being guilty of "such misconduct as to render him unfit to have his name on the Register of pharmaceutical chemists".

Geoffrey Hudson for the Society said Mr Sukhdeo had initially denied working whilst signed-off sick but subsequently admitted he had worked explaining he "needed the money".

Mr Sukhdeo's contract had been terminated for gross misconduct following a disciplinary hearing and he had paid back the money he was paid

on sick leave.

Mr Sukhdeo admitted the allegations and said he had lost a childhood friend in early 2002. He said he was depressed and got himself into debt with a credit card bill of about £10,000.

Admitting he had been dishonest, he added: "I feel remorse, I feel regret and I feel shameful. I feel shameful that I have let the profession down."

Announcing the decision to reprimand Mr Sukhdeo, committee chairman Lord Fraser of Carmyllie, QC, said: "We have no hesitation in concluding that he was guilty of such misconduct as to render him unfit to have his name on the Register.

"On the one hand this has been a very serious breach of trust which is wholly unacceptable

conduct. Such a breach of trust in some cases would alone be sufficient for removal.

"On the other hand this was a single incident in a career. He has been punished with the loss of his job and repaid the money he was paid erroneously by Boots.

"There is no question of his competence as a pharmacist and he has found employment in a hospital where he has settled down."

However, Lord Fraser said the committee was not impressed with Mr Sukhdeo's "alleged depression" and said: "It appeared to us to be somewhat contrived. With very great hesitation we have concluded that we will not direct your removal from the Register and will restrict our sanction to a reprimand."

STATUTORY COMMITTEE

Pharmacist duped into supplying hypnotic drug

A Northumberland pharmacist who was "duped" by a patient into supplying a hypnotic drug without a prescription was reprimanded last month.

John Bradbeer of Morpeth appeared before the Royal Pharmaceutical Society's

Statutory Committee accused of misconduct, as superintendent pharmacist and director of R.Hindhaugh (Chemist) Limited.

In January last year, a patient telephoned the pharmacy requesting a supply of 190 Heminevrin capsules against a

prescription she said had been written for her by her consultant psychiatrist and which she promised to give to the driver who delivered the medication.

The pharmacy had been routinely delivering medicines prescribed by her GP to the patient's home on a weekly basis.

She was told that only 30 capsules were in stock but no inquiries were made on who the consultant psychiatrist was and the capsules were given to a taxi driver to deliver, as the normal pharmacy driver was ill.

The taxi driver failed to obtain the prescription from the patient and four days later she telephoned the pharmacy asking for the balance of 160 capsules.

Mr Bradbeer asked her about the missing prescription but the patient claimed she had given it to the driver and the pharmacist supplied the additional capsules.

Geoffrey Hudson for the Society said: "The driver was given no instructions to check the prescription. Although the medication had been handed over, no prescription had been handed over in exchange.

"The Society says that Mr

Bradbeer failed to take reasonable steps to be satisfied that a valid prescription was in existence. The Society also says that both supplies were unlawful.

"Finally, the Society says that the company and Mr Bradbeer - as superintendent - failed to have adequate procedures for the delivery of medicines and also there was no audit trail."

Mr Bradbeer, who admitted the allegations, told the committee the patient was "very persuasive" but he had told her he only had 30 capsules in stock - when in fact they had more.

When the patient called back asking for the rest of the prescription she was adamant she had given it to the driver. "I believed her and made the supply thinking I would be able to recover the prescription from the taxi driver... I am extremely embarrassed about being duped."

Announcing the decision to reprimand Mr Bradbeer, Committee chairman Lord Fraser of Carmyllie QC said: "Mr Bradbeer has in a candid way admitted that he was in error and accepted that it amounts to misconduct."

COMMENDATION: A Morpeth Local Health Care Partnership (LHSCP) has been awarded a commendation for its role in the development of a new community pharmacy. Lessons in learning

Aston University is exploring pharmacy education in the UK, reports

A research team at Aston University is conducting two major national research projects: the first national evaluation of teaching, learning and assessment methods in UK schools of pharmacy, and a major study on career motivations and expectations among pharmacy undergraduates.

The projects have been commissioned by the Pharmacy Practice Research Trust of the RPSGB in response to *Making Pharmacy Education Fit for the Future*, a report from the Society's Pharmacy Education R&D Reference Group. This provides a review of current standards, systems and regulations relating to education and training (from undergraduate education through to continuing professional development) across the pharmacy workforce and makes recommendations on research needed to inform developments in pharmacy education.

Rob Darracott, RPSGB director of corporate and strategic development, said: "A commitment to lifelong learning is now part of professional life. The *R&D Report* highlights some major challenges for the Society in ensuring that pharmacists are equipped throughout their careers for the opportunities presented by the emerging healthcare agenda."

The report was presented to the Society's Council in December and the Group recognised that many Schools of Pharmacy are already developing innovative teaching, learning and assessment methods. Research bringing these initiatives together will promote wider dissemination of best practice in pharmacy education and inform the Society's approach to leadership and development in this core area of policy.

The Aston research team led by Professor Keith Wilson, head of Aston Pharmacy School, is multidisciplinary and draws upon expertise from two major faculties within the University. Dr Chris Langley and Katie Hatfield from Pharmacy are joined by a psychologist Peter Reddy and Dr Jill Jesson from Aston Business School. The results will indicate areas of best practice from all 17

pharmacy schools in the UK and provide clear pointers for the way in which pharmacy should be taught in the future. The Aston team includes expertise in evaluating educational methods and occupational psychology.

The study of teaching, learning and assessment methods in pharmacy undergraduate programmes in the UK is a seminal piece of research which will establish the first ever baseline for provision. This will complete in autumn 2004. Prof Wilson said: "We want to measure what is currently happening in UK pharmacy education, pinpoint innovation and new areas of teaching and provide a basis for the RPSGB and every Pharmacy School in the UK to plan for the progression of teaching right from undergraduate learning to CPD for practising pharmacists."

Prof Wilson continued: "We will look at all the different elements of teaching and how they can engender deep-seated learning rather than the superficial taking in of information. This will include clinical placement teaching; the way each school handles project work; the engagement of IT and virtual learning environments in pharmacy teaching; and problem

based learning. We are particularly interested in teaching and learning methodologies which relate to pharmacy as a profession because it is these that will inform the curriculum in the future.

"We expect to find diversity. We know there are Pharmacy Schools in the UK that have strengths and innovations in certain areas. The whole point of the study is that the results will go back to all the Schools, so the findings won't just drive the RPSGB's policy but will hopefully help to inform the future of pharmacy teaching itself."

The research will also have an impact on postgraduate education and those already working in the profession. Current debates about pharmacy as a profession and the changes that are already happening mean that every stage of pharmacy education needs to be looked at very carefully, making sure that it fits its purpose. Pharmacy practitioners need key competences and a sound knowledge base, a process which starts at undergraduate level and continues throughout their career through CPD (which becomes compulsory in 2006).

"Pharmacy education today isn't just about knowledge - it's about skills and attitudes too. We

need an efficient framework in which to teach and practice pharmacy."

The second research study, due to complete at Easter 2005, will look at current students' career choices and their professional expectations across the four-year pharmacy degree programme. Some 4,000 students will be involved. The Aston team will also look at the attitudes, perceptions and views of sixth form students in different socio-economic catchment schools and colleges across the West Midlands.

This will contribute to a wider understanding of the future profile of the pharmacy workforce and will also inform the RPSGB's wider portfolio of work related to workforce planning and policy.

Prof Wilson commented: "We want to systematically look at the reasons why students come to study pharmacy and what their perceptions of pharmacy are. In the UK there has been very little research in this area so we're viewing ours as the first in a much larger study area."

"Both these research studies need to be seen as the first stages in a longer term programme to develop an evidence base for pharmacy education and the profession. It's not just the content of the curriculum but also the methods we use to teach it and ensuring that we attract students with the right qualities. I think in the future it will no longer be a requirement that we have to teach certain subjects but we'll have to produce students who are competent enough to do the job. That's really the key to understanding the importance of this research."

Sally Hoban is marketing officer for Aston University.

Last week's question was: Which health professions' disciplinary committee cases should the Council for the Regulation of Health Professionals be expected to challenge?

"Reprimands or lesser penalties only, as [the decisions] could be a little bit subjective"

Karine Nash,
Aldershot

"Random selections. It's the fairest way"

Bryony Worthern,
Upton-by-Chester

"Any cases it chooses"

Gordon Black,
Bristol

"Reprimands or lesser penalties, to ensure that the correct decision was made"

Alfred Mudanga,
Cottingham

Comment

from the Editor

The impact of violence perpetrated against health professionals is disturbing. Over the past few weeks we have highlighted the types of abuse and intimidation community pharmacies have been facing due to their prominence in the local community.

This week, the pharmaceutical industry has reminded the Government that it too has seen no abatement in the levels of malicious attacks made against those working in the industry. Animal rights extremists, who the health minister Lord Warner prefers to call 'thugs and criminals', have not only been targeting those who actually work with the animals, but have been spreading their web of violence: secretaries' cars have been covered in acid, and the homes of company executives' neighbours have been daubed with graffiti.

The industry is rightly worried about the harm that this level of violence will do to future investment in pharmaceutical R&D in the UK. It argues that the industry should not be left to tackle the thugs with civil

injunctions alone, but should be supported more by the state.

What is more worrying is that as the extremists extend their activity, how much longer might it be before they target the health professionals who prescribe and supply these animal-tested medicines?

Lord Warner has affirmed the Government's strong opposition to violence, and says the police have been told more arrests should be made. But action is needed, not just words, otherwise the insidious threat of the animal 'liberationists' will continue to destroy – by fear – the civil liberties of those who aim to improve the lot of fellow human beings. And that's terrorism.

The police have been told more arrests should be made. But action is needed, not just words

Self regulation is already lost

You reported (*C&D*, April 3 p4) on the outcome of High Court actions brought by the Council for the Regulation of Healthcare Professionals against decisions made by the disciplinary committees of two health regulators. You also reported the Royal Pharmaceutical Society as saying that, despite the High Court ruling, "professional self-regulation remains intact".

I doubt, however, whether the General Medical Council, one of the regulators whose decisions had been taken to the High Court, would make the same claim. The GMC's chief executive Finlay Scott has said that the medical

profession does not have self-regulation. What it has, he says, is "professionally-led regulation in partnership with the public" (*C&D*, March 13, p20).

A letter (*Sunday Telegraph* March 28) from a former GMC member, Dr Jennifer Coleman of Dereham, Norfolk, pointed out that doctors are often not responsible for the decisions of the GMC "as they bow to the ever-increasing influence of...unelected lay people who are said to represent the patients." Lay GMC member, Ruth Evans (chairman of the GMC's standards committee), says in a further letter (*Sunday Telegraph* April 4) that "the

GMC's job is to represent the public interest, not to reflect the views of doctors."

The GMC has 40 per cent lay membership. The Society will head the same way if Council has its way and technicians are counted as lay members. So we, too, will be subject to the partnership approach.

Pharmacists need the backing of a strong professional association. Unfortunately, in its desire to preserve its illusory role as a self-regulator, representation is something that the Society looks like virtually abandoning.

Douglas Simpson
Beckenham, Kent

HOSPITAL
REPORTThe problems
of MDS

The supply of monitored dosage systems (MDS) has at last been sorted out in the community setting using a structured assessment.

Unfortunately, the situation in hospitals is not as clear-cut. Frequently the request for it comes at the last minute, when the discharge prescription arrives in the dispensary. Occasionally, the request accompanies the dispensed prescription with an apology that the ward forgot to request the MDS and the patient is now waiting to go home.

All very unsatisfactory; ideally the patients should be self-medicating on the ward, using the MDS for several days before discharge. Then a proper analysis of whether it is of use can be made. Other logistical problems should also be addressed. If the patient does not meet the criteria to qualify for the local pharmacy providing medication in an MDS, or the local pharmacy has reached its capacity to cope with MDS,

Home helps are not allowed to do more than ask the patient if they have taken their medication

who is going to fill the MDS box? Does the patient have relatives who can do this each week? Home helps are not allowed to do more than ask the patient if they have taken their medication.

All too often, these systems are seen as a panacea for medication related problems. "Has the patient had problems with their tablets before? Yes? Oh well then, they need an MDS." No further investigation is done in many cases. What if the problem was that they couldn't get into their previous MDS? Much work is required in this field before we can ensure that only those who will benefit from these systems are provided with them.

Written by a senior hospital pharmacist

TOPICAL REFLECTIONS

A Pandora's box is being opened

Admire or criticise them for it but in only a few short years Pharmacy Plus in Bristol has valiantly attempted to introduce clinical pharmacy practice to community pharmacy.

One major limiting factor however has been the supervision requirements of the Medicines Act which requires the physical presence of the supervising pharmacist, and so makes the use of community pharmacists off the premises very expensive. Even a short one-hour away requires locum cover or access to a second pharmacist, both equally as expensive.

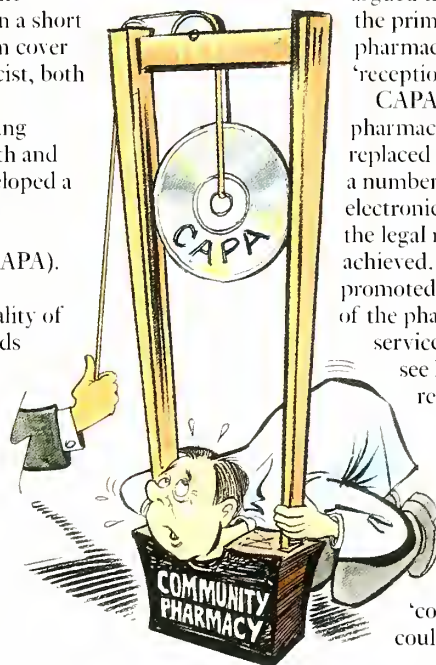

Tariq Muhammed, managing director of both Fusion Health and Pharmacy Plus, has now developed a computerised system called Consolidated Application for Pharmacy Administration (CAPA). He claims this software can overcome the problem of legality of remote supervision and intends launching it on the open market from August this year (*C&D April 3, p10*). A trial of the system is presently being evaluated but if it were given regulatory approval it could open a Pandora's box that would certainly back Fusion Health's claims to potentially revolutionise the community

pharmacy sector.

Direct supervision has long been a vexed question but despite attempts to change interpretation, the physical presence of the pharmacist is still a regulatory requirement. The result has been a wide network of easily accessible pharmacies where the pharmacist is always available for advice and supervision. It has been strongly argued that this enforced availability is the primary strength of community pharmacy and distinguishes it from other 'receptionist' fronted parts of the NHS.

CAPA offers the opportunity for the pharmacist's physical presence to be replaced by a distant pharmacist servicing a number of satellites using modern electronic communications to ensure that the legal requirements can be remotely achieved. I am sure the system will be promoted as enabling short-term absence of the pharmacist for extended clinical services but once approved, I cannot see how restrictions of time can be realistically applied.

The law is all or nothing and legal remote supervision will lead to community pharmacies trading and dispensing without the physical presence of a pharmacist. This is a concept which could destroy 'community pharmacy' and is one I could not support.

Pharmacist prescribing is not a Holy Grail

I always find Sheila Kelly's articles giving her industry perspective to over the counter medicines questions thought provoking. In last week's *C&D* she examined possible outcomes of the probability that most community pharmacists will become independent prescribers.

There certainly could be problems if the GP workload for the treatment of minor ailments were transferred via targets to the community pharmacist without the similar transfer of the appropriate resources. These resources are necessary to ensure the professional objectivity that is essential to independent prescribing and which could be undermined by pressure to make a sale – private or NHS – in order to maintain an income.

There could also be the problem of competition. Not all pharmacists will become independent prescribers at the same time, so those first to the post could see the promotion of their new-found responsibilities as an excellent way of increasing

their own customer numbers to the detriment of their colleagues.

The Department of Health is not naïve. They have always used the blunt instrument of competition to reduce the cost to the NHS of community pharmacy and leopards rarely change their spots. One reason for encouraging community pharmacist prescribing is to reduce costs and the DoH knows this is far easier to achieve in the competitive community pharmacy sector than under the tightly controlled GP contract.

Independent prescribing funded from existing money would encourage another poor numbers-driven service rather than the quality healthcare the Government so often vows to achieve but which, in the case of community pharmacy, it still hasn't delivered. I agree with Sheila that ultimately independent prescribing will not greatly affect the sale of OTC medicines but neither is it necessarily the Holy Grail that many are seeking.

In the first of two articles, coinciding with Parkinson's Awareness Week, Mary Allen describes the symptoms and differential diagnosis of Parkinson's disease

THE COLLEGE OF PHARMACY PRACTICE

This course (module 1300), in association with multiple choice questions being published in C&D May 1, provides one hour's continuing education

Parkinson's disease (PD) is a progressive neurological condition identified by Dr James Parkinson in 1817. It affects all aspects of daily living including movement. PD occurs worldwide, affecting an estimated four million people.

In the UK, there are around 120,000 people with idiopathic PD. It affects one in 500 people, and the risk increases with age, with symptoms usually appearing after the age of 50. However, of the 10,000 people diagnosed each year in the UK, 5 per cent (or 500 young adults) will be under 40.

The cause of PD is not yet known but it is associated with the degeneration of dopaminergic neurones in the substantia nigra in the mid-brain. Neuromuscular transmission associated with co-ordinated movement depends on a balance between the neurotransmitters dopamine and acetylcholine. Loss of dopamine in PD patients upsets this balance, with symptoms occurring when about 70-80 per cent of the dopaminergic neurones are lost. PD patients may also have lower levels of other neurotransmitters including serotonin.

Why the neuronal degeneration occurs remains unclear, but the cause is thought to be multi-factorial. There is no conclusive evidence that PD is a hereditary condition, but it remains an area of considerable research interest. It is rare to find more than one person in a family with PD, although family history is implicated in a minority of cases and is thought to be more significant in those with early-

onset disease. In most cases, development appears to be sporadic.

Some researchers think that, although PD is not directly inherited, there may be a genetic susceptibility. Vulnerable people may thus be more likely to develop PD when exposed to other factors such as environmental toxins or viruses. The role genetics may play in the development of PD is currently the subject of much research.

There are three main symptoms:

Tremor, which affects around 70 per cent of people with PD and tends to be less common in younger patients. It is defined as a resting tremor to distinguish it from other types. It decreases with activity and becomes more severe with anxiety. It commonly starts on one side of the body, with one hand or arm affected. This spreads over time to both sides.

Rigidity or stiffness of the muscles is a very common early sign of PD. This can cause problems with movements such as getting out of a chair or turning over in bed. Everyday activities like fastening buttons can pose a major challenge and facial expressions can be affected through stiffness of facial muscles. Posture is also affected, with patients becoming stooped. Aches and pains and fatigue commonly result.

Slowness of movement, or bradykinesia, results in difficulty in initiating movements or taking a long time to perform simple

- To be aware of the signs and symptoms of PD
- To know how PD differs from similar conditions
- To know which drugs may cause PD symptoms
- To be alert to ways of helping carers
- To be aware of possible future treatments

Rigidity or stiffness can cause Parkinson's disease patients problems with getting out of chairs

Continued on page 20 ►

Providing distractions can help Lewy body disease sufferers with hallucinations

tasks. Lack of co-ordinating sequenced movements can also be a problem.

Other common symptoms and problems include postural instability, difficulty with handwriting, disturbed sleep, fatigue and communication problems. The symptoms of PD usually begin slowly, and develop gradually and in no particular order. It is important to remember that everyone with PD is different: each has an individual symptom profile and may have a differing response to treatment. The nature and severity of symptoms and the rate at which the condition progresses also varies from one patient to another.

Chorea

Other conditions that share similar symptoms but differ from idiopathic PD in other ways are, with PD, collectively referred to as Parkinsonism, and account for about 15 per cent of all people with Parkinsonism.

Diagnosis is usually based on medical history and clinical examination. There are no specific tests for PD.

Other conditions (sometimes known as PD Plus syndromes) that share Parkinsonian symptoms include:

- **Multiple system atrophy (MSA)**, also known as Shy Drager syndrome, striatonigral degeneration or olivopontocerebellar atrophy. Atrophy occurs in neurones in the basal ganglia, cerebellum and brain stem, causing problems with movement, balance and autonomic functions, resulting in postural hypotension, loss of bladder and bowel control, erectile dysfunction and inability to sweat.

Some sufferers experience

heightened emotional response. The presence of structures called glial inclusion bodies, associated with a protein, alpha-nuclein, in the relevant areas of the brain, confirms a diagnosis of MSA.

MSA usually starts between the ages of 50–60 years. Recent research suggests that it affects one person in 20,000 in the UK.

Drug treatment of MSA includes:

- drugs used in PD (*see next week's article*), including levodopa and amantadine (although these are rarely effective)
- drugs to manage hypotension (all are currently unlicensed uses) low-dose fludrocortisone; ephedrine; midodrine (Gutron)
- drugs to improve urinary problems – anticholinergics, for example, oxybutynin to improve bladder control; desmopressin (DDAVP) to reduce the

production of urine overnight.

- **Progressive supranuclear palsy (PSP)** or Steele–Richardson–Olszeski disease was first described in 1963. It recently became more famous as the disease endured by comedian and musician Dudley Moore prior to his death in 2002.

PSP occurs in around one in 7,000 people, with up to 10,000 cases of PSP in the UK. However, like MSA, many cases are misdiagnosed (particularly in the early stages) as PD or other neurological conditions. PSP usually occurs from a patient's mid-50s onwards, and involves degeneration of neurones just above the nuclei in the mid-brain (hence supranuclear), and affects vision, movement and balance.

Examination of post-mortem tissue shows some shrinkage of the brain, together with clumps of the protein tau forming neurofibrillary tangles. Although these are characteristic signs of PSP, similar neurofibrillary tangles are also found in Alzheimer's disease, but in different parts of the brain, with different outcomes for the patient.

Symptoms and progress of PSP vary according to the affected neurones and their rate of death. Classic early symptoms include frequent unexpected falls, usually backwards. Other symptoms include a slightly abnormal gait, rigidity and backward arching of the neck, and a difficulty in willed upgaze and downgaze, that is, ability to move the eyes upwards and downwards voluntarily while keeping the head still.

Tremor occurs rarely. Speech may become slurred and guttural.

Average life expectancy of a PSP patient from onset of the disease is around seven years. Drug treatment is symptomatic.

Parkinson drugs are sometimes used but are often ineffective.

- **Benign essential tremor**, now simply called essential tremor (ET). ET is often misdiagnosed as PD, but an important difference that in ET the tremor is not particularly noticeable at rest, unlike PD where there is a resting tremor. ET can start at any age, affects both sexes and, in the majority of cases, is inherited. The age of onset, body part(s) affected and the severity of the tremors vary from person to person. The condition is slowly progressive. Tremor is the sole symptom of this disorder and other neurological problems rarely occur. Tremor may affect different body parts. Usually the hands are affected, although tremor of the trunk and legs is seen in some patients. Tremor is worsened by stress and anxiety.

Treatment is symptomatic, using anticonvulsant drugs (usually primidone), beta blocker (usually propranolol), benzodiazepines or combinations of these. Small amounts of alcohol may be helpful, instead.

- **Lewy body disease**, also known as dementia with Lewy bodies (DLB), combines the physical symptoms of PD with a rapidly deteriorating mental condition. A characteristic feature of DLB is detailed and convincing visual hallucinations, often involving people or animals. Patients with DLB may experience severe sensitivity reactions to antipsychotics (neuroleptics), leading to sudden death, so these drugs should be avoided. As neuroleptics are sometimes used for symptom control in Alzheimer's disease, early diagnosis is essential to avoid this danger.

Symptoms such as hallucinations may respond to reassurance and alternative distractions. PD symptoms in DLB may respond to PD drugs although these can make hallucinations and confusion worse. The cholinesterase inhibitor drugs used to treat Alzheimer's disease may also be useful in treating DLB, although they are not yet licensed for this use.

- **Vascular or arteriosclerotic Parkinsonism** may occur following minor strokes affecting the basal ganglia.

Management of PD relates to four stages

1. Diagnosis
2. Maintenance
3. Complex stage
4. Palliative stage

The early stages include diagnosis, management of co-morbidity, providing information about the illness, and setting up patient and carer support.

During the maintenance and complex phases, there will be many referrals to different members of the multi-professional team, and good communication between primary and secondary care is essential.

Complications in these phases may need managing and might include:

- deteriorating function

(immobility, slowness, withdrawal from activities, communication problems)

- loss of drug effect, motor fluctuations, dyskinesias (involuntary movements)

- confusion, depression, anxiety, hallucinations, memory changes
- constipation, incontinence, weight loss, hypotension, swallowing difficulties.

The palliative phase involves ensuring carer support and patient dignity, managing drugs (and considering dopaminergic drug reduction or withdrawal) and relieving symptoms and distress.

Voltarol®
Diclofenac
diethylammonium
Emulgel® P

50 g e
Gel

NOVARTIS

Voltarol Emulgel P has added over £1m to the category and packs the muscle to grow your business.

- **NEW** – Available in 50g, just what your heavier users want.
- **NEW** – Indicated for the relief of pain in mild arthritis.
- The only topical treatment to contain Diclofenac – the world's most widely prescribed anti-inflammatory analgesic.
- Unique 'Emulgel' formulation allows deep penetration to the point of pain.

Make it your first choice – more and more customers do.

VOLTAROL EMULGEL® P Prescribing Information Presentation: Gel containing 1.16% diclofenac diethylammonium (equivalent to 1% diclofenac sodium) for topical administration. **Indications:** Local symptomatic relief of pain and inflammation in trauma of the tendons, ligaments, muscles and joints e.g. due to sprains, strains and bruises, and localised forms of soft tissue rheumatism. Relief of pain in mild arthritis. **Dosage and administration:** Adults and elderly: 2 – 4g rubbed gently into affected area 3 – 4 times a day. Treatment should be limited to 7 days. Do not use on children under 12 years of age. **Contraindications:** Susceptibility to attacks of asthma, urticaria or acute rhinitis precipitated by aspirin/NSAIDs. Hypersensitivity to diclofenac, any other gel ingredient, aspirin/NSAIDs. **Use in pregnancy or lactation:** Not recommended. **Precautions:** Apply only to intact skin. Avoid contact with eyes, mucous membranes, diseased skin, skin wounds or open injuries. Not for use with occlusive dressings. Caution if current or previous history of bronchial asthma or peptic ulcers. **Side Effects:** Local irritation, erythema, pruritis, dermatitis. Rarely photosensitivity, hypersensitivity, asthma. **Interactions:** None reported with Voltarol Emulgel P; interactions have been observed with oral forms of diclofenac or other NSAIDs. **Legal category:** P **Trade Price and Suggested Retail Price:** 30 g: £2.94, £4.79. 50g: £4.28, £6.99 **PL No:** PL 0030/0174 **PL Holder:** Novartis Consumer Health, Wimblehurst Road, Horsham, West Sussex, RH12 5AB. **Date of preparation:** 23 February 2004.

● **Drug-induced Parkinsonism** occurs in around 7 per cent of patients with Parkinsonism. Extrapyramidal symptoms (EPS) are a common side effect of the older neuroleptic (antipsychotic) drugs to treat psychiatric disorders, although some of the newer atypicals may also produce EPS.

However, EPS can occur with any drug that blocks the action of dopamine including metoclopramide, used for nausea and vomiting, and prochlorperazine prescribed for nausea and vomiting and for vestibular disorders. Cinnarizine may also produce or exacerbate Parkinsonian symptoms. The sometimes poor use of anti-emetics and low dose antipsychotics in some care settings can lead to undiagnosed drug-induced Parkinsonism.

Patients with idiopathic PD may develop worsening symptoms if treated with these drugs. There are case reports and anecdotal evidence of several other drugs causing EPS, including SSRI antidepressants, amiodarone, valproate, phenytoin and NSAIDs. Lithium can cause tremor that may be misdiagnosed as PD.

Usually, the EPS is reversible once the offending drug is discontinued, with most people recovering within two months (some within hours or days). For a minority, recovery may take up to two years, while about a sixth of patients with drug-related Parkinsonism continue with their symptoms.

It is thought that, in these patients, the offending drugs may simply unmask an underlying

dopamine deficiency.

At present there is no cure for PD, but there are a range of treatments available to help control the symptoms and maintain quality of life. Drugs are the mainstay of treatment, and include levodopa (plus adjuncts), dopamine agonists, and the NMDA-antagonist amantadine, and will be considered in part two of this article.

Physiotherapy, speech and language therapy, and occupational therapy play an important role in the management of PD. Self-help strategies can be important in early-onset PD.

Surgery may help some patients. There are three types: ablative therapy (irreversible), which destroys certain overactive parts of the brain; stimulation therapy, which involves depolarisation of certain parts of the brain; and transplantation of brain tissue.

Alongside continuing research into new drugs, there are two other areas of research that hold

hope for the future:

● **Gene therapy** works by introducing normal genes into people with PD and other disorders to overcome the effects of defective genes which may cause, or play a part in, the condition's development. Unlike drug treatment, which controls symptoms, gene therapy offers the possibility of changing the natural progression of PD.

● **Stem cell therapy** involves taking and manipulating stem cells and implanting them in the brain to replace dead dopaminergic neurones and produce trophic factors to revive the dying parts of the brain. Despite setbacks in recent surgical trials, stem cell therapy may offer a real hope of a breakthrough in the treatment of PD.

PD carries a huge burden for patients and families. Horizons diminish and both patients and carers may feel socially isolated. Quality of life is affected through the symptoms and disability caused by the illness and through drug side effects, including motor fluctuations.

Communication barriers occur through lack of awareness and understanding by others about the disease. The increasing lack of non-verbal skills and the misperceptions that arise through this, together with the loss of body language, also create communication barriers.

Sexual difficulties and communication problems cause strain on relationships. It is emotionally difficult for carers to watch the people they love

Deteriorating mobility may mean a PD patient needs extra help

deteriorate, and frustrations abound – even finding suitable activities to occupy their time can be challenging.

Support for the patient and carer may be minimal, so that routine activities like prescription collection can present demands, particularly if a patient cannot be left alone at home without a carer.

There are many small things pharmacists can do to improve the lot of people affected by PD, whether this means providing a sympathetic environment, dealing with the usual problems associated with polypharmacy, or simply having all prescription medicines complete and ready, waiting for collection when a carer calls, with no 'owings' necessitating a further trip.

Mary Allen, FRPharmS, is a part-time community pharmacist and hospice pharmacist in Hertis.

Actionplan

1. In your practice workbook list the symptoms of PD and Parkinson's-like diseases. Are there any other diseases that produce any of these single symptoms (not necessarily as a complex of symptoms) such as tremor? Record them in your workbook and try to identify features that distinguish them from PD.
2. Use other resources to find out if there are other common symptoms or features of PD.
3. Do you dispense for PD patients? Do they visit the pharmacy? If not, do you have direct communication with them? Should you?
4. How could you improve your prescription service to PD patients? Should you dispense for them in an MDS system? If this method is adopted, can they get the medicines out of the packaging?
5. Think about your patients. Can you identify any with tremor? Might this be an early sign of PD? Should you talk to them about this?

Pharmacy Update for pharmacists

This new Pharmacy Update is a continuing education programme for pharmacists. With 10 questions per issue, it covers a wide range of topics relevant to the pharmacy profession. The programme is designed to be completed in the 15 minutes available between the end of the shift and the start of the next shift. The programme is available in the April and 17 September issues.

- **Cystic fibrosis is part 2 (1299)** ● **Parkinson's part 1 (1300)** ● **Parkinson's part 2 (1301)**. A telephone helpline offers independent verification of results – details on the monthly MCQ papers.

People who do not have access to Pharmacy Update can contact Mary Probert on 01732 377269.

SOLVE CASES FAST WITH BENADRYL®

Benadryl

BENADRYL ALLERGY RELIEF PRODUCT INFORMATION: Presentation: Acrivastine 8 mg. Uses: Allergic rhinitis. Dosage: Adults and children aged 12 – 65 years: One capsule up to three times a day. Contraindications: Hypersensitivity to acrivastine or triprolidine. Significant renal impairment. Precautions: Effects of alcohol or other CNS depressants may be enhanced. Advise not to undertake tasks requiring mental alertness. Pregnancy & lactation: Not recommended. Side effects: Rarely: drowsiness. RRP (ex-VAT): 12s £3.70; 24s £6.43. Legal category: P. PL holder: Pfizer Consumer Healthcare, Chestnut Avenue, Eastleigh, Hampshire SO53 3ZD. PL number: 15513/0035. Date of preparation: July 2003. **BENADRYL PLUS CAPSULES PRODUCT INFORMATION:** Presentation: Acrivastine 8mg and pseudoephedrine 60mg. Uses: Allergic rhinitis. Dosage: Adults and children 12 – 65 years: One capsule as necessary, up to three times a day. Contraindications: Hypersensitivity to any of the ingredients or triprolidine. Severe hypertension, significant renal impairment or severe heart disease, those who have taken MAOIs in the preceding 14 days. Precautions: Diabetes, hyperthyroidism, heart disease, hypertension, glaucoma or prostatic enlargement. Patients taking sympathomimetics, antihypertensives, and tricyclic antidepressants. Effects of alcohol or other CNS depressants may be enhanced. Advise not to undertake tasks requiring mental alertness. Pregnancy & lactation: Not recommended. Side effects: Rarely: skin rash, drowsiness, urinary retention or CNS excitement. RRP (ex-VAT): 12s £4.25, 24s £7.65. Legal category: P. PL holder: Pfizer Consumer Healthcare, Eastleigh, Hampshire SO53 3ZD. PL number: 15513/0017. Date of preparation: July 2003. **BENADRYL ONE A DAY & BENADRYL ONE A DAY RELIEF PRODUCT INFORMATION:** Presentation: Cetirizine 10mg. Uses: Symptomatic treatment of rhinitis and urticaria. Dosage: Benadryl One A Day, Adults and children 6 years and over: One tablet daily. Benadryl One A Day Relief, Adults and children aged 12 years and over: One tablet daily. Contraindications: Hypersensitivity to any of the ingredients. Precautions: As with other antihistamines avoid excessive alcohol consumption. Pregnancy & lactation: Not recommended. Side effects: Occasionally: headache, dizziness, drowsiness, agitation, dry mouth or gastrointestinal discomfort. RRP (ex-VAT): Benadryl One A Day, 14 £6.77, Benadryl One A Day Relief, 7 £3.79. Legal category: Benadryl One A Day, P. Benadryl One A Day Relief, GSL. PL holder: UCB Pharma Ltd, 3 George Street, Watford, Hertfordshire WD18 0UH. PL number: 08972/0032. Further information available from Pfizer Consumer Healthcare, Chestnut Avenue, Eastleigh, Hampshire SO53 3ZD. Date of preparation: July 2003. **BENADRYL ALLERGY ORAL SOLUTION PRODUCT INFORMATION:** Presentation: Solution containing 1mg/ml Cetirizine hydrochloride. Uses: Seasonal allergic rhinitis, perennial rhinitis and chronic idiopathic urticaria. Dosage: Adults and children 12 years and above: 10ml once daily. Children 6 – 11 years: 10ml once daily or 5ml twice daily. Seasonal allergic rhinitis only. Children 2 – 5 years: 5ml once daily or 2.5ml twice daily. Contra-indications: Hypersensitivity to any of the ingredients. Do not use in pregnancy or lactation. Precautions: Reduce dose by half in cases of renal insufficiency. Avoid excessive alcohol consumption. Side & adverse effects: Occasionally: drowsiness, headache, dizziness, agitation, dry mouth and gastrointestinal discomfort. Very rarely: convulsions. Price (ex-VAT): £4.25. Legal category: P. PL holder: UCB Pharma Limited, 3 George Street, Watford, Hertfordshire WD18 0UH. PL number: 08972/0033. Further information available from Pfizer Consumer Healthcare, Chestnut Avenue, Eastleigh, Hampshire SO53 3ZD. Date of revision: January 2011.

Aspirin not linked to pancreatic cancer

Aspirin use is not associated with an increase or decrease in pancreatic cancer deaths a large study in the USA has revealed.

Contrary to previous studies, the study of 987,590 patients found that 4,577 of these (0.5 per cent) died from pancreatic cancer, and there was no association between aspirin and pancreatic cancer even for those who reported frequent and long aspirin

use, the researchers claimed.

The incidence of cancer was similar for men and women and for those who were grouped by BMI, diabetes or smoking status. Although the study did not include data on patients' use of other NSAIDs, there is no strong evidence to associate aspirin use with pancreatic cancer mortality.

Welcoming this research, the Aspirin Foundation said: "There

has been some expression of concern on this matter over the past 12 months. It has always been the Foundation's view that aspirin is beneficial in resisting certain forms of pancreatic cancers as it also is with cancer of other organs such as bowel, lung, oesophageal, and breast cancer."

Journal of the National Cancer Institute 2004; 96: 524-8

FDA calls for suicide risk warning

The US Food and Drug Administration has asked drug manufacturers to include a statement warning of worsening depression or suicidal thoughts on certain antidepressant labels.

This follows recommendations made to the FDA by two of its advisory committees who are reviewing clinical trial data on paediatric antidepressant use. The FDA has stressed that no conclusion has been reached on whether antidepressants cause suicidal thinking or behaviour. However, strengthening the labelling will draw more attention to the need for close monitoring.

The drugs are: fluoxetine; fluvoxamine; bupropion; paroxetine; sertraline; citalopram; venlafaxine; nefazodone; escitalopram; and mirtazapine.

Antihypertensive helps drinkers quit smoking

Smokers who like a drink may find it harder to quit as it's down to their genes, but an antihypertensive could help, new evidence suggests.

US researchers found that the antihypertensive drug mecamylamine, a nicotine antagonist, suppressed the effect nicotine had on smokers after they had consumed alcohol. Users also reported a reduced satisfaction from smoking, after an initial increase in cigarette consumption to counteract the drug's effects.

Three times as many alcoholics smoke than the general population, and a drug that suppresses both addictions would be of benefit, claim the researchers. "Such an approach to smoking cessation would work especially well for drinkers as it would dampen both desires," said co-creator of the nicotine patch Dr Jed Rose.

"A relatively low dose of alcohol - below that required to induce any measurable euphoria - was enough to increase participants' enjoyment of nicotine significantly. In light of the current finding, it makes sense so many people who have quit smoking relapse when

they drink," Dr Rose concluded.

The small study (48 smokers who drank regularly) was published in *Nicotine and Tobacco Research*. Mecamylamine is already available in the USA as an

antihypertensive drug called Inversine from pharmaceutical company Targacept.

For more information:

Nicotine and Tobacco Research 2004; 6: 133-44

Babies at risk from antidepressant use

Babies whose mothers take antidepressants during pregnancy are at greater risk of neonatal complications, but a slightly lower risk was associated with SSRIs researchers found.

Neonatal respiratory distress, hypoglycaemia and convulsions were more likely to be seen in

babies whose mothers had taken antidepressants, with tricyclic antidepressants showing a slightly greater risk when compared to SSRIs, the Swedish study found.

Although SSRI use in pregnancy still carries some risk, the researchers concluded that SSRIs "may be the drugs of

choice during pregnancy".

Babies exposed to maternal SSRI use are twice as likely to experience respiratory distress and almost five times as likely to experience convulsions.

Scriptlines

Generic carvediol

Six companies are launching generic carvediol tablets this week - Alpharma, APS, IVAX Pharmaceuticals, Niche Generics, Ratiopharm and Sandoz.

All companies will supply packs of 28 tablets in four doses: 3.125mg; 6.25mg; 12.5mg; and 25mg.

For more information:

See Supplement to C&D Generics List

Provigil extension

Provigil (modafinil) has been granted an extension to its product licence and it can now be prescribed for excessive sleepiness associated with chronic pathological conditions.

These chronic pathological conditions include narcolepsy, obstructive sleep apnoea/hypopnoea syndrome (OSAHS) and moderate to severe chronic shift work sleep disorder (SWSD). The recommended daily dose for all of these conditions is 200-400mg, starting on 200mg and titrating up to 400mg depending on clinical need and patient tolerability.

Pharmacy **FORUM**

Whether you plan to enjoy the summer in sunny suburbia or sub-Saharan Africa, the whine of the mosquito can spell trouble. It may result in itchy and unsightly red lumps that could have been avoided, but it could lead to something more serious

Anyone who has visited the Welsh hills, England's moors or the Scottish Highlands will be all too aware of how unbearable those midges can make an otherwise pleasant day. And for the increasing number of travellers heading off to exotic locations abroad, bites by mosquitoes, flies and ticks can be the cause of serious health problems, such as malaria, yellow fever and tick-borne encephalitis. For these people insect repellents are 'must have' items.

So with the summer on its way, how much do you know about the insect repellents your pharmacy sells?

Today's repellents contain an active ingredient, solvents and in most cases a fragrance. After application, the solvents in the formulation evaporate, leaving the active ingredient on the skin. The repellent is effective as long as the active slowly evaporates, forming a layer of 'scent' over the skin. This 'scent' interferes with the mechanism that attracts biting insects to human skin. The most common active ingredients to look out for are:

DEET – for many years the gold standard. Generally the higher the concentration, the longer lasting the

Did you know?

- Only female mosquitoes bite
- Mosquitoes cannot transmit HIV
- Mosquitoes can detect carbon dioxide, given off in breath and from the skin at distances of up to 36m
- The attractiveness of different people to the same or different species of mosquitoes varies substantially
- Men are bitten more readily than women

protection. Products with 10-35 per cent DEET will provide adequate protection under most conditions. Use with care as can damage plastics, some synthetic fabrics and leather*. Do not use on young children.

Bayrepel (KBR) – a newer, patented ingredient used in the Autan range. A recent WHO report* concluded that Bayrepel is a repellent of choice for malarial prevention. It has repellent qualities comparable with, and often superior to, those of standard DEET at similar concentrations. In typical formulations it does not significantly attack common household materials.

IR3535 (EBA) – almost as effective as DEET, but less likely to provoke skin reactions and less harmful to synthetic

materials such as plastics. Found in some Jungle Formula products.

Citronella – the 'natural' option. Provides shorter complete protection time than DEET and other similar products. Frequent re-application can partially compensate for this* but protection is not guaranteed.

Most insect repellent ranges come in a range of formats – aerosols, pumps, lotions, wipes and sticks. Also watch out for the concentration of active ingredient. Many ranges offer standard and extra strength products.

Advise customers to only apply repellents to exposed skin and/or clothing. Never use over cuts, wounds or irritated skin. Do not use sprays and pumps directly onto the face – apply to the hands first and then to the face.

Promotion

Autan – tough on insects, gentle on skin

The **Autan** range of insect repellents is designed to protect everyone over two years old from mosquitoes, midges and other biting insects, both at home and abroad. **Autan** contains the unique formulation Bayrepel, a new generation active ingredient which is an alternative to DEET-based products, while being gentle on the skin. The World Health Organisation (WHO) recommends Autan as the repellent of choice for malaria prevention*.

Autan offers consumers two skin repellent ranges and an after-bite spray. The Active range provides protection for up to eight hours and the Family range for up to four hours. The Family range has the added benefits of aloe vera which moisturises and soothes the skin. If you forget to apply a repellent, use

Autan Bite-Ease to

cool and soothe insect bites and stings. All products in the **Autan** range are non-sticky and non-greasy, have a pleasant fresh fragrance, are suitable for children over the age of two years and are dermatologically tested.

	Up to 4 hours protection	Up to 8 hours protection	Insect bite relief
Adults			
Children over 2 years of age			
Infants under 2 years of age	Avoid areas at risk, cover up with long sleeved clothing		

The easiest way of helping your customers choose the correct **Autan** product is to ask them how many hours protection they'll need. This table is a useful guide to help select the most appropriate product.

More power to Senokot GSL

Reckitt Benckiser is adding a higher strength GSL product to its Senokot constipation brand.

Senokot Max Strength contains

15mg senna per tablet and is specifically targeted at people suffering from troublesome constipation.

The launch will be supported by a £400,000 national press campaign. A new advertisement will be appearing in women's weekly magazines throughout May and June.

The campaign's key message is that sufferers wanting a more powerful remedy don't have to compromise between efficacy and natural relief.

● Reckitt Benckiser has withdrawn its 'P' product Senokot Double Strength.

Wrist monitor close at hand

Braun is launching a new wrist blood pressure monitor which will be available exclusively through pharmacies.

Sensor Control BP 2550 features technology to ensure that the monitor is in the correct position (in line with the heart).

An interactive on-screen torso guides the user to the correct position for accurate measurement.

Each reading records the user's blood pressure and pulse rate as well as the time and date the measurement is taken.

Features include large buttons, an easy-to-read display and a comfort cuff with a wrist circumference of 13.5-20 cm.

Price: £69.00

NUK bottles it all up

MAPA Spontex is launching a new NUK infant feeding bottle following research into the problems experienced by mums when bottle feeding their baby.

NUK First Choice wide necked bottle is designed for easy cleaning and filling. It is ergonomically shaped making it easier to handle, with a wide base for stability.

The bottle is available in two

sizes and a choice of four colours.

It comes with a silicone orthodontic teat designed to minimise harmful swallowing of air and simulate the shape of a mother's nipple during breastfeeding as closely as possible.

Price: £3.49 150ml, £3.99 300ml

Mates range hopes to give women more Pleasure

Mates Healthcare is launching a condom range aimed specifically at women.

The Mates Pleasure range comprises three condoms designed to appeal to women aged between 25-35.

Research shows that over one third of all condom purchases are made by women (Omnibus 2002).

The range includes Sheer Pleasure - an ultra-thin condom, Intense Pleasure which is contoured with a combination of raised ribs and studs to heighten

stimulation and Xtra Pleasure - a shaped condom designed to provide pleasure for both partners.

The launch will be supported by a £2 million marketing campaign including competitions in lifestyle magazines, a website competition and sampling activity.

Range extensions targeted at women are planned for September.

Price: All Pleasure condoms £8.95 (10), Sheer Pleasure, Xtra Pleasure £2.25 (2)

Mum's the word for improved Thermoscan

Braun is launching an improved version of its Thermoscan infrared ear thermometer which is targeted at first-time mums.

According to the company, over 90 per cent of Thermoscan thermometers are purchased by mothers with at least one child aged 0-6 months.

Braun 4520 Thermoscan uses technology to confirm that it has been positioned correctly and verify that the temperature reading is accurate.

Other new features include a

comfortable soft heated tip to eliminate environmental influence on the reading.

Like the previous Thermoscan thermometer, it measures temperature in °C or °F in seconds, stores the last eight readings and has a display light for easy night-time reading.

It comes with 21 disposable lens refills, two batteries and a handy travel case.

RECOMMEND THE NO.1 NON-STEROIDAL NASAL SPRAY FOR HAYFEVER

Aller-eze®

Aller-eze nasal spray and eye drops azelastine hydrochloride [P]
For further info contact Novartis Consumer Health, Horsham, RH12 5AB

Most people blink about 25 times a minute
For hayfever customers who find runny itchy eyes might be tipping them over the average blink quota, Aller-eze eye drops will get straight to the site of the problem to sort it out

Get ready to help us start

their **natural rhythm**

With the launch of a **£2 million national TV campaign**, you'll notice that more and more customers are asking for Dulco-lax Tablets and Perles.

Across the country, people know that when constipation is making them feel bloated and sluggish, Dulco-lax Tablets and Perles offer gentle, predictable relief.

Make sure you've got what it takes to help restart your customers' natural rhythm. Stock up on Dulco-lax Tablets and Perles today – and don't forget, Dulco-lax Perles 20s will soon be available for self selection.

Dulco-lax®

**Dulco-lax Tablets contain bisacodyl
Dulco-lax Perles contain sodium picosulfate**

Dulco-lax Tablets & Perles: product information **Active ingredient:** Tablets - bisacodyl 5mg, Perles - gelatin capsules containing 2.5mg sodium picosulfate as monohydrate **Indication:** Short term relief of constipation **Dose:** Adults and children over 10 years: One to two tablets, or two to four capsules, at night. Children under 10 years should not take Dulco-lax Tablets or Perles without medical advice. Children 4-10 years: One tablet, or one to two capsules, at night. Children under 4 years: not recommended **Contraindications:** Intestinal obstruction, ileus, acute surgical abdominal conditions like acute appendicitis, acute inflammatory bowel diseases, hypersensitivity to bisacodyl (tablets) or sodium picosulfate (perles) or other component, and severe dehydration **Precautions:** Not to be taken on a continuous daily basis for long periods. Prolonged excessive use may lead to electrolyte imbalance and hypokalaemia, and may precipitate onset of rebound constipation. Diuretics or adreno-corticosteroids may increase the risk of electrolyte imbalance. Antibiotics may reduce laxative action of the perles. Do not crush or chew the tablets, milk or antacids should not be taken within an hour before or after the tablets. Dulco-lax Tablets/Perles should not be taken in pregnancy, especially the first trimester, unless the expected benefit is thought to outweigh any possible risk to the foetus. Not recommended for breast-feeding mothers **Side-effects:** Abdominal discomfort (abdominal pain or cramps), diarrhoea, allergic reactions, angio-oedema, and anaphylactoid reactions (tablets), skin reactions (perles) have been reported **Product Licence Holder:** Boehringer Ingelheim Ltd, Ellesfield Avenue, Bracknell, Berkshire, RG12 8YS **Presentations and suggested retail price:** 10 tablets £1.19 or 20 tablets £1.99 PL 00015/0240 (GSL) 60 tablets £4.49 PL 00015/0241 (P) Perles 50 capsules £4.59 PL 00015/0242 (GSL) 20 capsules £2.99 (GSL) PL 00015/0254 For further product information please refer to summary of product characteristics. Prepared January 2004

Love every bit with Impulse

The Impulse range has an eye-catching new look and is now described on pack as a 'bodyfragrance' instead of bodyspray.

The idea behind the move is to improve the fragrance credentials of the brand and to provide a clearer explanation of the product's function.

The new packaging is designed to reflect the brand's image as a fun and feminine.

Captions have been added to the back of the packs to

encourage consumers to 'love every bit' of themselves in a light hearted way.

The product is available in eight fragrances - Zen, O2, Spirit, Temptation, Hint of Musk, Siren, Air and Goddess.

Impulse packs will be supported by a £4 million package starting in mid-June with cinema advertising

featuring the message 'Love every bit'.

The campaign will also include radio, press and poster advertising, direct mail shots and sampling activity.

Put **Pharmacy**update in your CPD portfolio – register now for 2004

Pharmacyupdate appears in *Chemist & Druggist* every week and will deliver over 30 hours of CPP-accredited learning material in 2004.

Read the modules and test your learning using the monthly question papers. Use C&D's telephone marking service to register your answers and check your results.

If you miss a module, all accredited features appear on C&D's website at www.dotpharmacy.com, along with the question papers.

Make **Pharmacy**update a regular part of your CPD cycle.

It's a simple way to keep your clinical knowledge up to date.

It's accessible, week by week, direct to your pharmacy, or via the web. It's flexible – learn when you want to, where you want to.

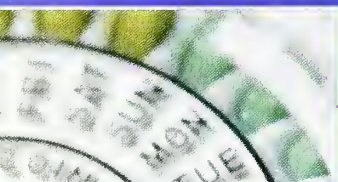

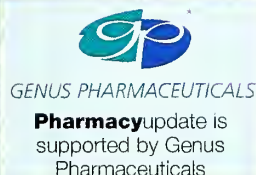

It's economical – with your time and your

pocket.

Registering for **Pharmacy**update couldn't be simpler.

Complete the coupon below and post it with your cheque to

Mary Prebble, Pharmacy Projects, CMP Information, Sovereign House, Sovereign Way, Tonbridge, Kent TN9 1RW. Pay by credit or debit card - phone Mary Prebble on 01732 377269 with your details.

☐ Please register me for **Pharmacy**update for 2004.

I enclose a cheque payable to CMP Information for £30.

☐ I am a pharmacist practising in Northern Ireland and wish to register under the NICCPET scheme (Do not enclose a cheque).

Pharmacists practising in Northern Ireland will have their registration fee paid by the Northern Ireland Centre for Pharmacy Postgraduate Education & Training (tick box on registration form when applying).

Every self-respecting pharmacy student is taught to avoid recommending lanolin and lanolin preparations. But what is the evidence for its bad reputation, asks Graham Phillips?

A **wolf** in sheep's clothing?

The *BNF* says lanolin may be associated with sensitisation,¹ albeit rarely. Is lanolin's notorious reputation as an allergen built upon the sound principles of evidence-based medicine that we, as pharmacists, pride ourselves on practising, or could it be an apocryphal self-propagating urban myth?

I was recently introduced to a paper entitled *Lanolin Allergy, Crisis or Comedy?* written by Albert Kligman and published in *Contact Dermatitis*.² In this elegantly written paper, Kligman argues that lanolin allergy has been "invented" by the inappropriate extrapolation of pseudo-science and the deliberate misinterpretation of the value and practice of patch testing.

Kligman notes that lanolin has been applied in huge quantities and varied forms to human skin since at least Egyptian times and that it is extremely widely used as an emollient vehicle in both cosmetics and drugs. In fact, lanolin was well accepted as a moisturiser and treatment for eczematous skin until around 50 years ago. For example, in a famous study, Bonnevie³ in 1939 discovered only one single case of lanolin sensitivity out of 2,358 patients tested.

So far so good. However, in 1953,

Saltzberger⁴ patch-tested 1,048 patients suspected of having acquired sensitisation to anhydrous Lanolin. Just over 1 per cent reacted. Soon after, Baer⁵ reported an incidence of 4.4 per cent in 637 dermatology patients. Hjorth⁶ reported an incidence of 1.62 per cent in eczema patients and concluded "sensitivity to lanolin in patients with eczema is impressive". Does this mean low or high? We need to be more specific.

So what was it that destroyed the reputation of "nature's emollient"?

In essence a series of patch-test studies was carried out among eczema and dermatitis patients in whom it was found that lanolin allergy was consistently well in excess of 1 per cent. Indeed, much higher levels can be found, in some cases as high as 70 per cent.⁷

This was extrapolated to infer that lanolin allergy in the 'standard' population occurs with the same prevalence as that in dermatology patients and thus was lanolin branded a major sensitiser.

However, lanolin is present in a huge variety of cosmetics and toiletries, so much so that complete avoidance would be extremely difficult, if not impossible. Indeed, lanolin is to be found in almost all products routinely

applied to the skin from lipsticks to moisturisers, foundations to hand creams and even hair products.

Studies (such as Bonnevie's³) in the normal (non-eczema) population have found it extremely difficult to uncover a single case of lanolin allergy. Kligman went on to patch-test nearly 1,000 individuals with no history of chronic skin disease by means of hydrous lanolin sealed to the skin of the back under tape for 48 hours. Astonishingly, he found not a single allergic patient.² He further hypothesised that lanolin allergy was often misdiagnosed or over diagnosed.

What accounts for this apparent mismatch in the incidence of lanolin allergy between 'normal' and 'dermatology' patients? Skin allergy is typically diagnosed by patch testing. As part of the patch-testing technique additional substances, such as salicylic acid, are commonly introduced which act as penetrating agents and hence aid diagnosis. These additions are, however, irritant and thus cloud the picture: it is unclear whether patch-tested individuals are reacting to lanolin itself or the penetrating agents.

Furthermore, in many patch tests it is not actually lanolin that is used. Commonly, the test material is 30 per cent wool wax alcohols, which may cause false positives from patch testing.

Dermatology patients, who are often the subject of patch testing for lanolin, differ from the "normal" population. For example, in older women, especially those with dermatitis, varicosities of the lower legs are frequent and hence these patients exhibit a much higher incidence of stasis dermatitis and stasis ulcers. Kligman observed that these patients are very highly allergic – often to multiple allergens.

For example, Reichenberger⁸ found that one third of 50 leg ulcer patients were allergic to Lanolin. Bright⁹ found that 13 per cent of leg eczema sufferers were sensitive to wool alcohols and results such as these have been consistently reproducible. Kligman concluded that lanolin is at worst a weak sensitiser and that this is only really relevant in eczema patients or those with a history of leg eczema or ulceration due to poor circulation.

By 1976 the unproven case against lanolin had gained a sufficient head of steam for the EC to insist that all lanolin-containing products carry a health warning. The outraged lanolin manufacturers campaigned against this and the requirement was retracted in 1982.

So far we have only considered the (unproven) case against unrefined lanolin.

Lanolin is derived by chemical processing of wool wax which, in itself, is the sebaceous gland secretion of sheep and serves to protect the animal from wetting. Wool wax is obtained by washing of the fleece and is a hugely complex mixture of esters of alcohols and fatty acids. The manufacturers of lanolin had become increasingly concerned about lanolin's reputation as a sensitiser.

EW Clark, who worked for Westbrook, one of the manufacturers, developed highly purified hypoallergenic medical grade lanolin. This refined lanolin was named Medilan. Clark went on to perform patch tests using Medilan on lanolin sensitive individuals. He demonstrated a 99 per cent reduction in allergy to 30 per cent wool wax alcohols – the gold standard test for lanolin allergy. In 149 individuals known to be lanolin sensitive, there were *no* reactions to refined, hypoallergenic lanolin.¹⁰

Most modern cosmetic and medical preparations do not contain unrefined lanolin but are usually based upon Medilan. Medilan has exceedingly low allergenicity, so much so that it is very hard to establish a single reaction even in the high-risk populations who suffer from eczema, dermatitis and leg ulceration.

Lanolin exposure takes place in many ways beyond simple applications to the skin. For example, it is used in shoe polish, waxes, paper, textiles, fur and leather dressings, and yet we see very low levels of reaction to any of these. Nor is there recognised to be an exceptional level of allergy in workers involved

Which products contain lanolin?

Lanolin, in one form or another, is found in an incredible variety of products, not just cosmetics and toiletries. It is found in lipsticks, moisturisers, foundations, cleansers, body and hand creams and hair products. It is also to be found in shoe polish, waxes, paper, printing and textiles, fur and leather furniture.

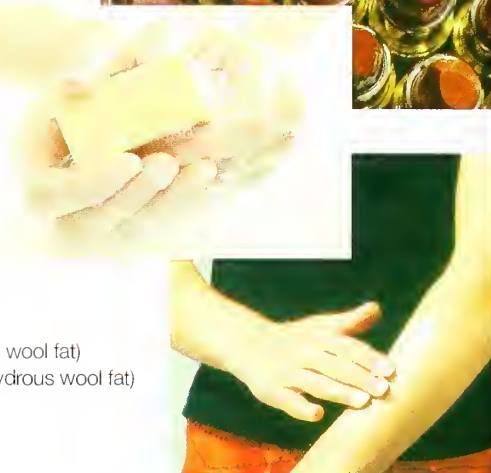

Further confusion is added because of the huge variety of lanolin-derived products and inconsistencies of nomenclature.

'Wool wax, wool alcohols'

- Hydrous Ointment BP (wool alcohols ointment 50 per cent)
- Hewlett's Cream (hydrous wool fat 4 per cent)
- Kamillisan (contains 'wool fat')
- Keri (contains 'lanolin oil')
- Eucerin cream (states 'wool fat')
- Morhulin (wool fat derivative)
- Nivea cream ('lanolin alcohols')
- Eurax bath oil (wool alcohols)
- Oilatum emollient (wool alcohols)
- Drapolene (wool fat)
- Sprilon Spray (wool alcohols)

'Hypoallergenic lanolin'

- E45 cream (hypoallergenic hydrous wool fat)
- E45 lotion (hypoallergenic hydrous wool fat)
- E45 itch relief cream (hypoallergenic hydrous wool fat)
- E45 emollient wash cream (hypoallergenic hydrous wool fat)

in the manufacturing of these products.

Lanolin is especially valuable as a moisturiser because it penetrates through the external layers of the skin down as far as the stratum granulosum. Here it holds in water droplets, acting like a sponge which can release water to the dry skin layers above when required.¹¹

As for the role of the pharmacist, the imminent prospect of pharmacist prescribing presents an exciting addition to our role. Now, as never before, we have the opportunity to demonstrate our unique expertise as the 'drug experts'. Now, as never before, we must base

our practice upon sound evidence, not anecdote.

The challenge, therefore, is to critically examine the evidence that lanolin in general, and Medilan in particular, are major sensitisers. I would recommend all colleagues to take a look at Kligman's work – and if, as I have, you conclude that lanolin allergy is a 'fabrication' then we must change our practice for the future.

The Centre for Pharmacy Postgraduate Education distance learning course on Dermatological Problems (CPPE 1998) describes lanolin as "a known sensitiser". Strikingly, Kligman's paper was published in 1983 and he devoted much of his research thereafter to restoring the good name and reputation of Lanolin and Medilan.

My sister, a classic car enthusiast, drives a green Morris Minor. My children, based upon this experience, believe that all Morris Minors are green – and that every green car is a Morris Minor. Are we applying a similar logic

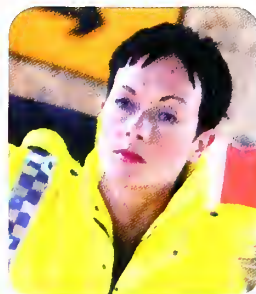

to lanolin allergy?

In this era of evidence based practice it is hard to explain why Kligman's voice has struggled to make its self heard. ☹

The knowledge

Cambridge Counterpart is the complete guide to working on the medicine counter

The Cambridge Counterpart training course has given over 12,000 pharmacy assistants the knowledge they need to work professionally and effectively on the medicines counter. It remains the easiest to use and the best value training course for counter assistants.

Counterpart's 14 distance learning modules are accredited by the College of Pharmacy Practice.

How to register

Each assistant must be registered for telephone marking and certification at a cost of £41.13. Each assistant will also need access to a training pack. A pack costs £29.38 and can be used by up to four assistants.

Just complete the application form below and post it to us with a cheque, or alternatively call with your credit card details.

Post your completed form, with a cheque payable to CMP Information Ltd, to: Mary Prebble, Pharmacy Editorial Projects, Sovereign House, Sovereign Way, Tonbridge, Kent. TN9 1RW

For further information, or to make a credit card payment, contact Mary Prebble on 01732 377269

**RECKITT
BENCKISER**

Excellence is the only option

Pharmacy Territory Manager South West & South Wales

Reckitt Benckiser is the world's number one in household cleaning and a leading player in health and personal care. The company nurtures talent and encourages creative thinking, which is why it is a global success. Their world class brands include Lemsip, Finish, Vanish, Gaviscon, Veet and Dettol - each being either number 1 or 2 in its sector.

Working for the UK Healthcare business, reporting to the Regional Sales Manager, you will manage a territory that covers Gloucester, Avon, Somerset, Devon and Cornwall, plus Gwent and Glamorgan. This territory includes almost 300 customer accounts with the primary objective of driving profitable growth.

A "Total Territory Management" approach is essential, as your responsibilities cover many facets - understanding territory business challenges, executing stretch business plans, delivering market share growth ahead of the market, achieving optimum levels of professional detailing, developing Regional Multiple Accounts and co-ordinating training seminars. For the right person this role can include supporting our marketing department at head office along with field sales training opportunities.

If you are the ideal candidate, you'll be a graduate - preferably a life science degree - with knowledge/training in anatomy/physiology

and at least 12 months of medical, pharmacy or FMCG selling experience. You will be self-motivated, highly organised, analytical and adaptable, having a pro-active approach to changes and evolution within the market. Your initiative, inter-personal and PC skills will need to be of the highest calibre.

To apply for this position please send your CV, along with a covering letter and salary expectations, to Toni Cairns e-mail: tmsales.job@reckittbenckiser.com postal applications to HR Dept, Reckitt Benckiser, Dansom Lane, Hull HU8 7DS.

Closing date: 9.00am Monday 19th April 2004

PHARMACY BUSINESS WANTED

Individual Pharmacist would like to acquire a Pharmacy Business in the Manchester Area. For a confidential discussion and a quick decision please contact Mr Pathak on 0161-969-6311 or 07976-273-592

Appointments

District Manager

Fife/Forth Valley

We have more than 1,300 pharmacies in the UK, all of which are dedicated to the community in which they operate. Innovative services such as testing for diabetes and high blood pressure mean that they can do more for local people than ever before. Add to that your own brand of management and motivation, and they'll be inspired to achieve even greater things.

Responsible for pharmacists and non-pharmacists across this beautiful part of Scotland, you'll turn your hand to recruitment, development, performance management and employee relations. You'll spend the rest of your time concentrating on the business itself, in terms of how it's performing and how it can be developed, exchanging ideas and information with both the store teams and your management colleagues. In addition, you'll look at our services and product offering, and make sure that your teams are building strong relationships with customers.

There's a lot to the role, which is why we'll give you a great deal of autonomy as well as support. At least three years' management experience in a retail or multi-site operation will have equipped you with all the skills you need - what we'll give you is a structured environment and space to exercise them so that you can make a real difference to the business.

To apply, please contact Denise Walker, Regional Personnel Administrator on 0141 433 9449 or e-mail Denise.Walker@lloydspharmacy.co.uk

Colin Williams

Colin Williams has been appointed managing director of Keyline Brands Ltd, the personal care brand owner and distributor. Mr Williams was chief executive of Network Health & Beauty until last September, and has previously worked for Alberto-Culver, Wilkinson Sword and Reckitt & Colman. The biopharmaceutical company Ferring has

announced the appointment of **John McGuire** as president of its research institute.

Dr McGuire has joined Ferring after 25 years with Johnson & Johnson.

His most recent position was corporate vice president of business development in J&J's pharmaceutical group.

Mawdsleys sponsors rugby Reds

Mawdsleys marketing manager Philip Bradley (centre) presents a sponsorship cheque for the next two years to Salford City Reds chairman John Wilkinson (left) and commercial manager Ray Hill

Mawdsleys has renewed its sponsorship of Salford City Reds, the Tetley rugby super league club. The wholesaler has sponsored the team since 2001 and are now committed to the club for another two years.

The donation will continue to help finance the primary outreach programme. As part of the initiative, club coaches provide

rugby training at local primary schools. Pupils can visit the rugby ground on match days and take part in mini games at half-time.

As part of the deal, the Mawdsleys logo will feature on the first team and under-18s academy team shirts. In addition, the company will continue to choose the 'Player of the Month' throughout the season.

Vote Viagra

Tax cuts as a vote winner is not a new concept for aspiring politicians but free Viagra tablets certainly is.

According to a snippet in *The Times* last Wednesday: "A federal lawmaker in Rio de Janeiro was ordered to step down after being found guilty of buying votes with Viagra and other medicine."

Now there's an upstanding idea.

Listerine rallies to the call

Mouthwash may not appear the obvious choice of sponsor for a rally team, but followers of the Ancro Rally Championship circuit may have noticed a Listerine branded Subaru Impreza, pictured disappearing into a cloud of gravel at the first race of the season recently.

The car can go from 0 to 100 kilometres per hour in 5 seconds and has a top speed of 210 km/h. The link? Well, according to a spokesman, Listerine's speed is equally impressive.

Pratty Flowers all round

Pictured from the left are: (back row) treasurer Neil Roberts, secretary Mike Culshaw, Halifax branch secretary Anne Cawdron, Halifax branch chairman Alan Dean; (front row) Huddersfield branch chairman Roy Carrington, and Gill Hawksworth

Our esteemed president Dr Gillian Hawksworth has a fine pair of lungs and likes to make her branch meetings special. A member of her church choir, she has been known to burst into song at the most formal of dinners.

It happened last week on Gill's home patch as she addressed the 'Huddersfield Branch of the RPSGB. Having been sent a copy of the original sheet music by Brenda Hepplestone, our Gill was keen to give voice to what is known in the vernacular as 'Pratty Flowers'. Having made the guests go through a warm up session, Gill led them in a rendition of: "Abroad for pleasure as I was walking ..."

Deciphering the lyrics, the song seems to be about a rambler who comes across "a most beautiful

damsel" pining for her shepherd boyfriend. He's gone off and left her while he fights the French and the Spaniards. She's bored and lonely, and regrets that she will "no more to yon green banks" go to rest herself and look at the local bovines. She sighs wistfully: "But I will take thee to yon green gardens where the pretty flowers grow."

'Pratty Flowers' is officially called the Holmfirth Anthem. Holmfirth, as you may be aware, is the Yorkshire town made famous by *Last of the Summer Wine*.

It is a shame, then, that the formal picture recording the Branch's annual dinner does not reveal whether the ladies were required to wrinkle their stockings in homage to Norah Batty.

Pharmacy assistant Sheila Keighley recently celebrated 40 years of service at Rowlands Chemists, Prestatyn. The occasion was marked with presentation of a silver photograph frame from pharmacist Melissa Jones (left) in front of colleagues (from left) Alison Kemp, Kelly Jones and Gillian Edwards

Win a great family holiday in France with Thomson Al Fresco

**NEW
FOR
2004**

EVERYONE'S A WINNER!

Enter this Pharmacy Travel prize competition and you will automatically receive a holiday discount voucher worth up to £500

Les Sablons is one of the most popular family holiday parcs in France. Situated between Montpellier and Narbonne, just 15 kilometres from Cap D'Agde, with direct beach access, excellent watersports and leisure facilities. **Les Sablons** boasts two outdoor swimming pools, a childrens pool and many other activities including tennis,

archery, boules, cycling, horse-riding and mini-golf.

There is much to discover nearby including the medieval walled city of Carcassonne and The Camargue – renowned for it's wildlife. The impressive Thomson Al Fresco holiday homes are brand new for 2004.

The prize is for a family of up to 5 people sharing a Puccini

holiday home. It includes return mid-week channel crossing with Hoverspeed, seven nights accommodation and a welcome pack.

The holiday can be taken between 3rd April/17th June or 27th August/12th September 2004 (subject to availability). Other dates may be selected upon payment of supplementary costs by the prize-winner.

Generics

Now also available in caplets & capsules

Ultramol

Paracetamol 500mg, Codeine 8mg, Caffeine 30mg

Strong, fast acting pain relief

ULTRAMOL Prescribing Information Presentation: Effervescent tablets, capsules and caplets, each containing Paracetamol 500 mg, Codeine Phosphate 8 mg and Caffeine 30 mg. **Indications:** For the relief of moderate to strong pain. **Dosage and Administration:** For oral administration only. The effervescent tablets should be dissolved in at least half a tumbler of water before ingestion. Capsules and caplets should be swallowed with water. **Adults, including the elderly:** Two tablets not more frequently than every 4 hours. Maximum of 8 tablets per 24 hour period. **Children:** Not recommended for children under 12 years. **Contra-Indications:** Hypersensitivity to paracetamol, codeine or caffeine or any other constituents. **Conditions where morphine and opioids are contraindicated.** **Warnings:** Special care should be observed in patients with severe renal or hepatic impairment. Care should be taken in patients whose condition may be exacerbated by opioids, those on concurrent treatment with other CNS depressants, with prostatic hypertrophy, with inflammatory or obstructive bowel disorders. Excessive intake of tea, coffee or cola with these tablets may make patients tense and irritable. Nursing mothers should also be advised to avoid these beverages as irritability and poor sleeping patterns have been observed in breastfed infants. Each effervescent tablet contains 362 mg sodium, which may be harmful to people on a low sodium diet. **Do not take with any other paracetamol containing products.** Immediate medical advice should be sought in the event of an overdose, because of the risk of serious liver damage. **Interactions:** May occur with domperidone, metoclopramide, cholestyramine, chloramphenicol, monoamine oxidase inhibitors, drugs that reduce hepatic microsomal enzymes (e.g. alcohol, barbiturates) and warfarin (and other coumarins). **Side-effects:** Adverse effects to paracetamol are rare, but hypersensitivity including skin rash and blood dyscrasias have been reported. Codeine can cause opioid effects, e.g. constipation, nausea, vomiting, dizziness, light headedness, confusion, drowsiness, urinary retention. Frequency and severity depend on dose and duration of therapy and patient susceptibility. Tolerance and dependence can occur, especially with prolonged high dosage of codeine. Caffeine may produce headache, tremor, nervousness, irritability, sleeplessness, palpitations and GI tract irritation. **Legal Category:** P. Ultramol Effervescent tablets: 60 tablets, RSP: £5.99, PL 12063/0082. **PL Holder:** Sterwin Medicines, PO Box 611, GU1 4YS. Ultramol Capsules: 24 capsules, RSP: £2.99, PL 12063/0027. **PL Holder:** Wrafton Laboratories Ltd., N Devon EX33 2DL. Ultramol Caplets: 32 tablets, RSP: £3.39, PL 12063/0028. **PL Holder:** Wrafton Laboratories Ltd., N Devon EX33 2DL. Ref: PI/Ultramol combination. PI/1/Feb 04. PIP Codes for Wholesaler's Internal Use	6
PIP Codes for Generics	7
PIP Codes for Appliances	66
Wholesalers/Distributors list	68
Suppliers	70
Disallowed Dressings & Appliances	73

Who makes what: a unique source list

The C&D Generics Supplement not only lists the seven-digit PIP Codes, so providing buyers with a unique source list for unbranded lines in pack sizes ranging from counter and dispensary to small-scale manufacture, but also lists the PIP codes which have been allocated to users for their own internal use.

The list is arranged so that users can trace alternative suppliers easily, and at the same time have the relevant PIP Code for ordering and product identification. Entries are updated in the weekly Price List Supplement when changes are notified to C&D by manufacturers. C&D would be pleased to receive details in writing, of any packs not currently listed and for which codes are required.

The following compilation rules have tried to be observed:

1. When the PIP code was converted from six to seven digits, a zero was placed before the old number, so retaining the existing check digit.
2. New PIP Codes are allocated randomly and start with the figure "1".

3. In the interest of continuity, priority in re-allocation of existing codes has been given to suppliers whose products carry the PIP Code on their packs.

4. Entries are generally under pharmaceutical name in order to bring all suppliers together for maximum buyer choice. However, counter packs will often be labelled with a popular synonym (eg Gee's linectus, Whitfields ointment). A cross-reference has been provided whenever products are shown under a synonym in suppliers' lists.

5. The names of brands containing a single active ingredient are listed at the beginning of each ingredient entry as a cross reference in conjunction with the C&D Price List.

6. The "DT" symbol indicates Drug Tariff pack sizes, which have been taken from the March 2004 edition.

The PIP Code

History

The benefits of a common code for pharmacy products have been long recognised, and over the years various working parties recommended the creation of such a code. In 1982 the National Pharmaceutical Association, in conjunction with Benn Publications (publishers of *Chemist & Druggist*), created the PIP Code in which they now hold joint copyright. This move had the support of several major pharmaceutical wholesalers.

Definition

The PIP Code is a product identifying number which has been allocated to goods distributed through pharmacies. All types of products are included and every pack size and colour or other variation has its own unique PIP Code number. The codes are published alongside each product entry in the *Chemist & Druggist* monthly Price List and weekly supplements, ensuring that a readily accessible and up-to-date PIP Code reference is widely circulated.

Initially, a six-digit code was chosen for ease of keyboard entry, but demand for the PIP coding system has necessitated the introduction of a seven-digit code. The last of these digits is a check digit (see p5) to minimise errors in recording.

Uses

The individual computer systems operated by manufacturers, wholesalers and retailers can be interfaced to recognise the PIP Code, which therefore provides a common language. This enables the retailer to

retain a freedom of choice of supplier and makes it possible for all involved in the distribution chain to benefit from streamlining their communications and merchandise handling systems.

Initially the PIP Code was used mainly as an interface between retailer and supplier for the purpose of placing and receiving orders, and virtually all pharmaceutical wholesalers can now recognise PIP Code when transmitted electronically. However, within retail pharmacy it is used increasingly for stock control and point-of-sale data capture. Most computer bureaux handle PIP Code data for clients, and many EPoS and dispensary systems make use of the PIP Code facility.

Computer users who choose to adopt the PIP Code as the primary code for their systems can avoid the time and expense of maintaining their own database. This is a considerable advantage to smaller businesses and pharmacies which have only limited clerical resources.

Developments

Requests for further information on the Code's use, and licence applications etc, should be addressed to:

Mr Richard Maw
PIP Code Administrator
National Pharmaceutical Association
Mallinson House
40-42 St. Peter's Street
St. Albans
Herts AL1 3NP
Tel: 01727 832161

PIP Code principles

The Pharmaceutical Interface Products Code Regulatory Authority is the National Pharmaceutical Association, which takes advice from a technical panel representing retail and wholesale PIP Code users, plus *Chemist & Druggist* (who maintain the NPA's master PIP Code file).

The code is based on computer codes used to maintain the *C&D* Price Service but has been augmented to incorporate a number of product categories not considered appropriate for publication in the *C&D* monthly Price List (such as some watches, confectionery, stationery).

Code users may find the following points of policy helpful:

General

1. Manufacturer and distributor codes are published in Section 2 of the *C&D* monthly Price List.
2. Within the seven-digit PIP Code, codes have been reserved for users' own requirements (see para 12), but some wholesalers have allocated part of the series to "service" items such as bags and bottles. Retailers should obtain details of such allocation from their usual suppliers before using this series as dump codes etc.
3. Discontinued items are deleted from the *C&D* Price List upon notification by the manufacturer but remain on the master file for reference. If a product is re-marketed by the same supplier within that period, every effort is made to use its former code.
4. Where there are minor adjustments to pack sizes the existing code is generally retained to help retailers monitor sales performance. When the trade unit alters there is no requirement to issue new codes.
5. Both branded and generic product codes can be issued in advance of product launch with full security and confidentiality. The allocated numbers are reserved on the *C&D* computer pending advice of launch. Manufacturers of ethicals are particularly asked to use this facility so that codes can be notified on their standard letter to wholesalers. Intercontinental Medical Statistics (IMS) and *Chemist & Druggist* have available a joint form (approved by ABPI and BAPW) for prior allocation of both SDA and PIP codes. *C&D* has its own PIP Code allocation request form for use by manufacturers who do not require a SDA code.

Variants

6. Products which have no variants (colour, flavour, etc.) are identified by a separate "main" code for each pack size, representing singles wherever possible. This code appears immediately before the trade price column in the *C&D* Price List.
7. Where products include variants the "main" code does not appear - instead there are individual codes in italic type beneath the entry. However, the "main" code is allocated to a variant (e.g. neutral, normal, white, original, small etc) in order to reduce confusion for code users.
8. Where variants are added to an existing range the "main" code will normally be retained as the variant code for the original version. If this variant is subsequently discontinued its code will remain the "main" code but will no longer be published.

Special cases

9. PIP codes for unbranded products are shown in the *C&D* Generics Reference Book, distributed free to all *C&D* subscribers, additional copies are available on request. This supplement also lists wholesalers accepting PIP Code for ordering purposes, Generic Suppliers and Disallowed Dressings and Appliances section.

Note: Branded generics (ie, where a prescription calling for the brand name alone is sufficient to identify absolutely the product required) are to be found in the *C&D* Monthly P. L. Branded products with a single generic ingredient are listed in the generics book under the generic name.

10. Certain surgical/sundries groupings are at present not fully covered by PIP Code. This applies particularly to products where the multitude of size and type variations is great and/or product developments are frequent, so that retailers are likely to rely on manufacturers' product number or full description for ordering from a wholesaler. However, some of the more standard and frequently prescribed brands and generic items (eg many NHS appliances) are coded in the *C&D* Price List and the Generics Supplement.

11. Products with an HP indication are packs and preparations only supplied to hospitals. Products are coded if manufacturers anticipate them being prescribed to out-patients.

12. Promotional products are coded using the 500-000 series. The categories for coding are 'Banded packs', 'Price Marked packs' & 'counter/merchandise units'. These products are listed at the back of the supplement, and cumulate through the month before appearing in the back of the monthly price list.

Temporary and seasonal packs are not coded by *C&D*.

Codes within the 600-0000 & 850-000 to 899-999 are used by wholesalers etc., in accordance with the batches allocated to them by *C&D*, for their internal use. Retailers should use the 900-0000 series.

Check-digit calculation

The check (seventh) digit of the PIP Code is arrived at by using the following calculation:

1. Take each digit starting with units position then tens position and so forth and multiply by 1,2,1,2,1,2, etc.
2. Add up resultants of 1. (Add the digits not the products ie if resultant is two digits then add them together).
3. Subtract the figure at 2 from the next highest multiple of 10.
4. Answer is the modulus 10 check digit. If no remainder then check digit is zero.

To check

1. Take each digit (including check digit) and multiply by 1,2,1,2,1,2 (starting in units position).
2. Total resultants as before.
3. Answer should be an exact multiple of 10.

Example

$$\begin{array}{rcl}
 & 3 & 5 & 8 & 9 & 2 & 5 & \text{(original number)} \\
 & \times 1 & \times 2 & \times 1 & \times 2 & \times 1 & \times 2 & \text{(multiplicands)} \\
 = & 3 & 10 & 8 & 18 & 2 & 10 & \text{(resultants)} \\
 = & 24 & & & & & & \text{(sum of digits)} \\
 & & & & & & & 3 + 1 + 0 + 8 + 1 + 8 + 2 + 1 + 0 \\
 30 - 24 & & & & & & & \text{(subtract from next multiple of 10)} \\
 = & 6 & & & & & & \text{(this result is the modulus 10 check digit)}
 \end{array}$$

Check

$$\begin{array}{rcl}
 & 3 & 5 & 8 & 9 & 2 & 5 & 6 & \text{(PIP code number)} \\
 & 3 & 10 & 8 & 18 & 2 & 10 & 6 & \text{(resultants)} \\
 = & 30 & & & & & & & \text{(sum of digits)} \\
 = & 0 & & & & & & & \text{(correct - exact multiple of 10)}
 \end{array}$$

Coding queries

Coding queries related to products published or to be published in the C&D Price List and Generics Reference Book should be addressed to Colin Simpson, Price List Controller, Chemist & Druggist, CMP Information Ltd, Sovereign Way, Tonbridge, Kent TN9 1RW (telephone 01732 377407).

Queries relating to codes held on the master file should also be addressed to Colin Simpson at the above address.

Matter of policy should be referred to Mr Richard Maw, PIP Code Administrator, National Pharmaceutical Association, Mallinson House, 40-42 St. Peters Street St. Albans Herts AL1 3NP (telephone 01727 832161) from whom, for NPA members printouts of the master file in alphabetical or numerical order may be purchased. Non-members can apply to C&D direct.

The PIP Code copyright is owned by CMP Information Ltd (publishers of *Chemist & Druggist*) and the National Pharmaceutical Association is the licensed administrator.

Technical panel

The PIP Code technical/consultative panel, set-up by the National Pharmaceutical Association to advise it on code maintenance and development, is chaired by Mr Richard Maw of NPA and has the following members: Sonia Garner (NPA information department), Colin Simpson (C&D Price List Controller, responsible for maintaining the PIP Code master file, the issuing of PIP Codes and their publication through C&D Price Services), Patrick Grice (Price List and Projects Manager), Darren Larkin (representing C&D Price Service), Andy Charlesworth (representing Numark Ltd), Nick Jones (representing Gehe UK), Devyani Patal (representing UniChem plc), David Houghton (hospital representative), Col Michaels (independent retail pharmacist), Craig Spurdle (representing Phoenix Pharmaceuticals).

Recommended International Nonproprietary Names

This publication shows the new names brought about by the implementation of the *European Community Directive 92/27/EEC*, which has been consolidated and is now *Directive 2001/83/EC*. These Directives authorised the use of rINNs in the labelling of medicines throughout the EC.

For further information refer to the MHRA web site at www.mhra.gov.uk

The *Chemist & Druggist* Monthly Price List and Weekly Price Supplement are available electronically. The database and update services are available in the form of either a complete; partial or customised database; according to preferred product classifications. They are intended for wholesalers and EPoS suppliers for onward transmission to clients. For further details of costs and formats please ring 01732 377407/457, or fax 01732 377559 price list section.

PIP CODES FOR WHOLESALER/DISTRIBUTOR INTERNAL USE

1. The 600-0000 & 850-0000 to 899-9999 series of codes are available for internal use by wholesalers/distributors under the control of the C&D Price Service.
2. **C&D** Price Service will issue wholesalers/distributors with blocks of codes from within the 600-0000 & 850-0000 to 899-9999 series on request. Those codes will be exclusive to that wholesaler or distributor.
3. Wholesalers will issue and maintain codes for their own internal use from within the blocks issued to them by the **C&D** Price Service. When that block is used up they should apply to **C&D** for a further block.
4. Code blocks issued to each wholesaler/distributor will be published in the Generics Guide twice yearly and will be

- available on request from **C&D** Price Service.
5. PIP Code users and IT systems suppliers should refuse to accept PIP codes from any wholesaler/distributor that are outside their allocated block, and refer the originator to the C&D Price Service for a code block allocation.
6. In due course, administration of the 700-000 & 800-000 to 849-9999 series codes will revert to the **C&D** Price Service. Wholesaler/distributor generated codes which are within the 700-000 & 800-000 to 849-9999 series will no longer be recognised. Any product codes from these series that are still live should be recoded using a code from within the block issued. At least six months notice will be given.

At the beginning of some of the generic entries there is a further list of names in bold capital letters.

These names are of the brands which contain the single generic ingredient under which they are listed. This information is to allow for easy cross referencing with branded equivalents in the main C&D Price List.

STERWIN MEDICINES

Co-Dydramol (Sterwin Medicines)		
tablets blister 10/500mg

At the beginning of some of the entries there is a further list of names in bold capital letters. These names are of the brands which contain the single generic ingredient under which they are listed. This information is to allow for easy cross referencing with branded equivalents in the main C&D Price List.

DISALLOWED DRESSINGS AND APPLIANCES

A guide to both proprietary and non-proprietary items for which payment will not be made if dispensed against NHS prescriptions issued in England and Wales. Derived from the lists used by the PSNC Prescription Research Centre it includes extensive cross-referencing for quick access to particular products.

Sandoz we focus on people

February 200

At Sandoz, everything we do is centered around people. Our products help millions of people lead a normal life that would be unthinkable without medication.

We are committed to continuously broadening our product range to provide

state-of-the-art, affordable products and technologies to our clients.

More than 4000 different pharmaceutical products in more than 120 countries.
